(1) Solvent partners should bring in cash to make good the loss on realization.
(2) Q's deficiency of ₹ $1,85,100$ ( $₹ 2,07,000$ - ₹ 21,900 ) should be shared by $P$ and $T$ in the ratio of their capital i.e. $7: 3$. $R$ will not bear any loss on deficiency, because at the time of dissolution he had a debit balance in his Capital Account.
(3) The amount realised from the estate of $Q$ is ₹ 21,900 .

Required:
(A) Calculate the amount of Provisions and contingencies
(B) Prepare Profit \& Loss Account for the year ended 31 ${ }^{\text {st }}$ March, $2016 . \quad 4+6=10$

## Answer:

(a) As per AS-7 'Construction Contract' when it is probable that total contract costs will exceed total revenue, the expected loss should be immediately recognized as an expense. The amount of such a loss is determined irrespective of (a) Whether or not work has commenced on the contract, (b) the stage of completion of contract activity as per AS-7, (c) the amount of profit expected to arise on other contracts which are not treated as a single contract.
We are to compute the anticipated/foreseeable loss and Additional provision required which are as follows:

|  | Particulars |
| :--- | ---: |
| 1. $\quad$ Contract price (given) | 260 |
| 2. Cost incurred till date (Work certified+ Work to be certified) | 162 |

9. Write short notes on any three out of the following:
(a) Project Accounting
(b) Difference between Receipts \& Payments Account and Income \& Expenditure Account
(c) Reserve for Un-expired Risk
(d) Minimum Rent/Dead Rent

Answer:
(a) Project Accounting:

Project accounting is the practice of creating financial reports specifically designed to track the financial progress of projects, which can then be used by managers to aid project management.
Utilizing Project Accounting provides Project Managers with the ability to accurately assess and monitor project budgets and ensure that the project is proceeding on budget. Project managers can quickly address any cost overruns and revise budgets if necessary. Project accounting allows companies to accurately assess the ROI of individual projects and enables true performance measurement. Project managers are able to calculate funding advances and actual versus budgeted cost variances using project accounting. As revenue, costs, activities and labours are accurately tracked and measured, project accounting provides future benefits to the organization. Future quotes and estimates can be fine-tuned based on past project performance. Project accounting can also have an impact on the investment decisions that companies make. As companies seek to invest in new projects with low upfront costs, less risk, and longer-term benefits, the costs and benefit information from a project accounting system provides crucial feedback that improves the quality of such important decisions.
(b) Difference between Receipts and Payments Account and Income \& Expenditure Account:

|  | Receipts and Payments Account |  | Income and Expenditure Account |
| :---: | :---: | :---: | :---: |
|  | 1. It is merely a summary of the cash transactions - which begins with the opening balances of cash and bank and ends with the closing balances of cash and bank. |  | It is a comparable account of a profit and loss account which shows the incomes, expenses and surplus/deficit for the period. |
| 2. | It is almost like a Real Account |  | It is almost like a Nominal Account. |
| 3. | It records all monies received or paid during a year, irrespective of revenue or capital nature and also relating to the past, current or following year. |  | It records only expenses and revenues for the current year. Items of capital nature or relating to the past or future period are excluded. |
| 4. | Here, receipts are shown on left-hand side and payments on the right-hand side. |  | Items appearing on the Receipts and Payments Account cross over sides as they enter into Income and Expenditure Account, that is, incomes on the righthand side and expenses on the lefthand side. |
|  | The balance of this account represents closing balances of cash and bank. |  | The balance represents either surplus or deficit for the period. |

6. This is followed by an Income and 6. This is followed by a Balance Sheet. Expenditure Account.
(c) Reserve for Un-expired-Risk:

This is applicable in General Insurance business only. This is in the nature of provision for claims that may arise in respect of policies which are subsisting on the date of balance sheet. Since premium has already been received in respect of such policies, provision must be made for the claims that may arise out of such policies. Insurance business is peculiar in that the premium is received in advance but the risk can arise on any day. In general insurance the policy is issued for a year which means the risk is covered for a year. Chances of the risk covered occurring do not come down proportionately with the passage of time. For example, if on the balance sheet date the unexpired period of a particular policy is one month (eleven months having expired) we cannot say that the risk on the policy is reduced to $1 / 12$ th of the total risk. Even on the last day of the policy company' risk is as high as it was on the day the policy was issued. Therefore, insurance companies must provide for the risks associated with all such policies for which the premia has been received and the policies are still in force. Thus a large portion of the premia collected must be kept in reserve for unexpired risk. Keeping in view the nature of the business, the Executive Committee of the General Insurance Council (which has been set up under the (5) Insurance Act to supervise general insurance companies) has laid down that in the case of marine insurance the provision for unexpired risk should be $100 \%$ of the net premium and in the case of other businesses (like accident, fire, theft, etc.) the provision should be $50 \%$ of the net premium.

## (d) Minimum Rent/Dead Rent:

A contract is entered into between the landlord and the lessee for payment of royalty, usually calculated upon the quantum of production or sale at a certain stipulated rate. So, if there is little or no production or sale, the landlord would receive little or no royalty at all, thus affects the monetary interest of the landlord as well as the lessee. It is normally not acceptable to the owner, since sale or production mostly depends on the capacity of the person to whom the rights have been given. To avoid such a situation, the landlord and the lessee agreed upon a minimum periodical amount that the landlord will receive from the lessee, even if the actual royalty as calculated on the basis of actual production or sale is less than such minimum amount.

This assured and mutually agreed periodical minimum amount is known as "Minimum Rent". The minimum rent is also called dead rent, certain rent, fixed rent, etc.

Example: Suppose royalty per ton of production is ₹ 10 and the minimum (annual) rent is $₹ 4,00,000$. Now, the actual production is 35,000 tons, then actual royalty would become ₹ $3,50,000$. In this case the minimum rent of $₹ 4,00,000$ will have to be paid by the lessee. On the other hand, if the actual production is 46,000 tons, then the actual royalty would become ₹ $4,60,000$. In this case ₹ $4,60,000$ will have to be paid by the lessee. Thus, as there is a stipulation for minimum rent, then either the minimum rent or the actual royalty whichever is more shall have to be paid by the lessee.
