Step 1: Find mean & S.D. for each variable.

Step 2 (Cur Imp): Find the Covariance matrix.

Step 3: Find the Correlation matrix
because it is very simple to understand.

Covariance matrix

$$\begin{matrix} & \begin{matrix} x_1 & x_2 & x_3 \end{matrix} \\ \begin{matrix} x_1 \\ x_2 \\ x_3 \end{matrix} & \begin{pmatrix} 0 & 0 & 0 \\ 0 & 0 & 0 \\ 0 & 0 & 0 \end{pmatrix} \end{matrix} \quad \begin{matrix} \text{Diagonal matrix.} \\ \left. \begin{matrix} \sqrt{r(x_1)} \\ \sqrt{r(x_2)} \\ \sqrt{r(x_3)} \end{matrix} \right\} \begin{matrix} C_{12} = C_{21} \\ C_{13} = C_{31} \\ C_{23} = C_{32} \end{matrix} \end{matrix}$$

when there are 3 variables.

You have to compute

$$(3C_1) = 3^2 \rightarrow \text{variables}$$

Q. To compute Covariance = $(3C_2) = 3$ ✓
