

**INTERMEDIATE EXAMINATION
Syllabus 2016****Paper 8: COST ACCOUNTING (CAC)****Time Allowed: 3 Hours****Full Marks: 100****There are Sections A, B, C and D to be answered subject to instructions given against each.**

Section A					20 X 1 = 20 Marks
You are required to answer all the questions. Each question carries 1 mark. Instructions: Each question is followed by 4 Answer choices and only one is correct. You are required to select the choice which according to you represents the correct answer.					
1.	a.	VED Analysis Method is applicable when_____ are used.			
		(i)	Spare parts	A	
		(ii)	Materials		
		(iii)	Labourers		
		(iv)	All of these		
	b.	Selling and Distribution Overheads are absorbed on the basis of _____ .			
		(i)	Percentage on Selling Price		
		(ii)	Percentage on Works Costs	A	
		(iii)	Rate Per Unit		
		(iv)	None of the above		
	c.	In the absence of any clear information, Joint Factory Overheads will be allocated in the ratio of _____ .			
		(i)	Direct Wages	A	
		(ii)	Prime Cost		
		(iii)	Work Cost		
		(iv)	None of the above		
	d.	Integral Accounts eliminate the necessity of operating _____ .			
		(i)	Cost Ledger Control Account	A	
		(ii)	Stores Ledger Control Account		
		(iii)	Overhead Adjustment Account		
		(iv)	None of the above		
	e.	Which of the following best describes Fixed Cost?			
		(i)	It may change in total where such change is unrelated to changes in production.	A	
		(ii)	It may change in total where such change is related to changes in production.		
		(iii)	It is constant per unit of change in production.		
		(iv)	It may change in total where such change depends on production within the relevant range.		
	f.	The allocation base used should be most strongly associated with the _____ .			
		(i)	Cost of Direct Materials		
		(ii)	Cost of Direct Labour		
		(iii)	Overhead Cost	A	
		(iv)	Total Cost		

Mock Test Paper with Model Answers for June 2022 Online Examination – Inter/P08-CAC/S1

	g.	Variable Cost per unit _____.	
	(i)	Increases when the number of units produced increases.	
	(ii)	Does not change when the number of units produced increases/ decreases	A
	(iii)	Decreases when the number of units produced increases.	
	(iv)	Decreases when the number of units produced decreases.	
	h.	The Cost of Capital is the Weighted Average of :	
	(i)	Fixed and Variable Costs.	
	(ii)	Incremental Cash Inflows and Outflows.	
	(iii)	Debt and Equity financing.	A
	(iv)	Net Present Value and Internal Rate of Return	
	i.	A Job-order Costing System is likely to be used by _____.	
	(i)	Soft-drink Bottler	
	(ii)	Breakfast Cereal Manufacturer	
	(iii)	Paint Manufacturer	
	(iv)	Custom Home Builder	A
	j.	In a Process Costing System, when raw materials are put into process, the cost of the items is transferred from _____.	
	(i)	Work in Process to Finished Goods	
	(ii)	Finished Goods to Cost of Goods Sold	
	(iii)	Raw Materials to Work in Process	A
	(iv)	Finished Goods to Cost of Goods Sold	
	k.	The type of costing system commonly used by companies that produce a large number of homogeneous units in a continuous production process is called a _____.	
	(i)	Unit Costing System	
	(ii)	Job-Order System	
	(iii)	Management Cost System	
	(iv)	Process Costing System	A
	l.	Composite Cost Unit for a hospital is:	
	(i)	Per day	
	(ii)	Per bed	
	(iii)	Per patient	
	(iv)	Per patient-day	A
	m.	The ending Work in Process inventory in the mixing department contains 300 units that are 30% complete with respect to labour costs. How many equivalent units are in the ending inventory?	
	(i)	300	
	(ii)	70	
	(iii)	210	
	(iv)	90	A
	n.	Activity based pricing seeks to:	
	(i)	Charge customers with the costs that they are creating.	A
	(ii)	Make greater profits by charging all customers more.	

Mock Test Paper with Model Answers for June 2022 Online Examination – Inter/P08-CAC/S1

	(iii)	Maintain all customers in the customer base		
	(iv)	All of the above		
	o.	If the contribution margin is less than zero:		
	(i)	The selling price is more than the variable cost per unit.		
	(ii)	The fixed costs should be increased.		
	(iii)	The company should sell more units.		
	(iv)	There is no positive break even point.	A	
	p.	Which of the following is a resource constraint:		
	(i)	Machine Hour Available	A	
	(ii)	Sales Commission		
	(iii)	Cost Per Unit		
	(iv)	Budgeted Overhead		
	q.	For the purpose of Proof, Material Cost Variance is equal to:		
	(i)	Material Usage Variance + Material Mix variance		
	(ii)	Material Price Variance + Material Usage Variance	A	
	(iii)	Material Price Variance + Material yield variance		
	(iv)	Material Mix Variance + Material Yield Variance		
	r.	Sales budget is a/an:		
	(i)	Expenditure budget		
	(ii)	Functional budget	A	
	(iii)	Master budget		
	(iv)	None of these		
	s.	Marginal Costing technique follows the following basic of classification:		
	(i)	Element wise		
	(ii)	Function Wise		
	(iii)	Behaviour wise	A	
	(iv)	Identifiability wise		
	t.	Difference between standard cost and actual cost is called as _____.		
	(i)	Wastage		
	(ii)	Loss		
	(iii)	Variance	A	
	(iv)	Profit		

<div>Section B</div> <div>You are required to answer all the questions. Each question carries 2 marks.</div> <div>Instructions: Each question is followed by a space where you are required to type your answer.</div>			<div>10 X 2 =</div> <div>20 Marks</div>
2.	a.	Compute the Inventory turnover ratio from the following: Opening Stock - Rs.10,000, Closing Stock - Rs.16,000, Material Consumed - Rs.78,000	

Mock Test Paper with Model Answers for June 2022 Online Examination – Inter/P08-CAC/S1

		Type your answer here 6 times	
		ROUGH WORK Average Stock = $(10000+16000)/2 = 13,000$ Inventory Turnover Ratio = $78,000/13,000 = 6$	
	b.	What is a Goods Received Note?	
		Type your answer here Goods Received Note is a document prepared by the Goods Receiving Department that unpacks the goods received and verify the quantities and other details.	
	c.	If Profit as per Cost Accounts is Rs. 12,000 and the amount of Factory Overhead over-recovered is Rs. 3,000, then profit as per Financial Accounts will be Rs. _____.	
		Type your answer here 15,000	
		ROUGH WORK Profit as per Cost Accounts + Add: Factory Overheads over-recovered = Rs.12,000 + Rs.3,000	
	d.	If Profit is 50% of Sales, then what is percent of Profit on Cost?	
		Type your answer here 100%	
		ROUGH WORK If Sales = 100, Profit = 50. Cost = Sales - Profit = 50. Thus, $(\text{Profit}/\text{Cost}) \times 100 = 100\%$	
	e.	What are Running Costs?	
		Type your answer here These costs are variable in nature, includes fuel, lubricating oil, wages of drivers / cleaners (if paid on per trip / kilometer). These costs can be easily identifiable with each of the vehicle.	
	f.	What is Retention Money?	
		Type your answer here Retention money is the portion of the value of work certified, which is kept by a contractee as security money for any loss or damage caused by the contractor.	
	g.	In a process 6,000 units are introduced during a period. 5% of input is normal loss. Closing work-in-process 60% complete is 800 units. 4,900 completed units are transferred to the next process. How much is the Equivalent Production (units) for the period?	
		Type your answer here 5,380	
		ROUGH WORK $4,900 + (60\% \text{ of } 800)$	
	h.	If sales are Rs. 150,000 and variable cost are Rs.50,000. Compute P/V Ratio.	
		Type your answer here 66.67%	
		ROUGH WORK $(1,00,000/1,50,000) \times 100 = 66.67\%$	
	i.	State the main tasks of management achieved through budget and budgetary control that help in achieving the anticipated targets.	
		Type your answer here Planning, co-ordination and control	
	j.	If Sales are Rs. 90,000 and Variable Cost to Sales is 75%, how much is the Contribution?	
		Type your answer here 22,500	
		ROUGH WORK $90,000 \times (100-75)\%$	
Section C			12 X 4 = 48 Marks
You are required to answer any 4 out of 6 questions in this section			
Instructions: Each question is followed by a space where you are required to type your answer.			
			48
3.			
	a.	The following relates to a particular item of materials of a manufacturing company.	4 x 2

		<table><tr><th>Ordering quantities (tonne)</th><th>Price per ton (Rs.)</th></tr><tr><td>Less than 250</td><td>6.00</td></tr><tr><td>250 but less than 800</td><td>5.90</td></tr><tr><td>800 but less than 2,000</td><td>5.80</td></tr><tr><td>2,000 but less than 4,000</td><td>5.70</td></tr><tr><td>4,000 and above</td><td>5.60</td></tr></table> <p>The annual demand for the material is 4,000 tonnes. Stock holding costs are 25% of material cost p.a. The delivery cost per order is Rs. 6.00.</p> <p>You are required to compute the following:</p> <p>(i) Optimum Order Size (in units)</p> <p>(ii) Annual Ordering Cost (in Rs.)</p> <p>(iii) Annual Carrying Cost (in Rs.)</p> <p>(iv) Annual Total Inventory Cost (in Rs.) annum if orders are made according to optimum order size.</p>	Ordering quantities (tonne)	Price per ton (Rs.) 	b.	Explain the terms responsibility centre and cost centre?	4																																																					
		<p>Type your answer here</p> <p>A responsibility centre in Cost Accounting denotes a segment of a business organisation for the activities of which responsibility is assigned to a specific person. Thus a factory may be split into a number of centres and a supervisor is assigned with the responsibility of each centre. All costs relating to the centre are collected and the Manager responsible for such a cost centres judged by reference to the activity levels achieved in relation to costs. Even an individual machine may be treated as a responsibility centre for cost control and cost reduction.</p> <p>CIMA defines a cost centre as “a location, a person, or an item of equipment (or a group of them) in or connected with an undertaking, in relation to which costs ascertained and used for the purpose of cost control”.</p>																																																						
4.	a.	The following is the Trading & Profit and Loss Account of ABC & Co.:																																																						

		<table> <tr> <th>Particulars</th><th>Rs.</th><th>Particulars</th><th>Rs.</th></tr> <tr> <td>To Materials Consumed</td><td>23,01,000</td><td>By Sales (30,000 units)</td><td>48,75,000</td></tr> <tr> <td>To Direct Wages</td><td>12,05,750</td><td>By Stock of Finished Goods (1,000 units)</td><td>1,30,000</td></tr> <tr> <td>To Production Overheads</td><td>6,92,250</td><td>By W.I.P:</td><td></td></tr> <tr> <td></td><td></td><td> Material</td><td>55,250</td></tr> <tr> <td></td><td></td><td> Wages</td><td>26,000</td></tr> <tr> <td></td><td></td><td> Production O/H</td><td>16,250</td></tr> <tr> <td></td><td></td><td></td><td>97,500</td></tr> <tr> <td>To Administration Overheads</td><td>3,10,375</td><td>By Interest on Bank deposit</td><td>65,000</td></tr> <tr> <td>To Selling & Distribution Overheads</td><td>3,68,875</td><td>By Dividends</td><td>3,90,000</td></tr> <tr> <td>To Preliminary Expenses written off</td><td>22,790</td><td></td><td></td></tr> <tr> <td>To Goodwill written off</td><td>45,000</td><td></td><td></td></tr> <tr> <td>To Fines</td><td>3,250</td><td></td><td></td></tr> <tr> <td>To Interest of Mortgage</td><td>13,000</td><td></td><td></td></tr> <tr> <td>To Loss on Sale of Machine</td><td>16,250</td><td></td><td></td></tr> <tr> <td>To Taxation</td><td>1,95,000</td><td></td><td></td></tr> <tr> <td>To Net Profit</td><td>3,83,960</td><td></td><td></td></tr> <tr> <td></td><td>55,57,500</td><td></td><td>55,57,500</td></tr> </table> <p>ABC & Co. manufactures a standard unit. The cost accounting records of the firm shows the following information: Production overheads have been charged at 20% on prime cost. b.	Discuss the treatment of overtime premium in Cost Accounts.	4																																																												
	<p>Type your answer here</p> <p>Overtime premium is a part of total wages of overtime period. In cost accounting the treatment of overtime premium will be as follows:</p> <ol style="list-style-type: none"> (i) If the overtime is resorted to at the desire of the customer, then the entire amount of overtime including overtime premium should be charged to the job directly. (ii) If it is due to a general pressure of work to increase the output, the premium as well as overtime wages may be charged to general overheads. (iii) If it is due to the negligence or delay of workers of a particular department, it may be charged to the concerned department. (iv) If it is due to circumstances beyond control, it may be charged to Costing Profit & Loss Account.

b.	Describe Operation Cost and Operating Cost.	2																																																			
	<p>Type your answer here Operation cost is the cost of a specific operation involved in a production process or business activity. The cost unit in this method is the operation instead of process .When the manufacturing method of a concern consists of a number of distinct operations , operating costing is suitable. Operating cost is the cost incurred in conducting a business activity. It refers to the cost of concerns which do not manufacture any product but which provide services. Industries and establishments like power house, transport and travel agencies, hospitals, schools etc. which undertake services rather than the manufacture of products, ascertain operating costs.</p>

Type your answer here

- (a) Material Sub-usage Variance = Rs. 233 (Favourable)
 (b) Material Mix Variance = Rs. 133 (Adverse)
 (c) Material Usage Variance = Rs.100 (Favourable)
 (d) Material Price Variance = Rs. 470 (Adverse)
 (e) Material Cost Variance = Rs. 370 (Adverse)

ROUGH WORK

Material	Standard Data			Actual Data		
	Quantity (kg)	Price (Rs./kg)	Value (Rs.)	Quantity (kg)	Price (Rs./kg)	Value (Rs.)
X	1,000 (500 x 2)	3	3,000	1,100	3.10	3,410
Y	2,000 (500 x 4)	2	4,000	1,800	2.20	3,960
	3,000		7,000	2,900		7,370

Material	SQSP (Rs.)	RSQSP (Rs.)	AQSP (Rs.)	AQAP (Rs.)
	(1)	(2)	(3)	(4)
X		966.67 X 3 = 2,900	1,100 X 3	
Y		1933.33 X 2 = 3,867	1,800 X 2	
Total	7,000	6,767	6,900	7,370

- (a) Material Sub-usage Variance = (1) – (2) = 7,000 – 6,767 = Rs. 233 (F)
 (b) Material Mix Variance = (2) – (3) = 6,767 – 6,900 = Rs. 133 (A)
 (c) Material Usage Variance = (1) – (3) = 7,000 – 6,900 = Rs.100 (F)
 (d) Material Price Variance = (3) – (4) = 6,900 – 7,370 = Rs. 470 (A)
 (e) Material Cost Variance = (1) – (4) = 7,000 – 7,370 = Rs. 370 (A)

8. You are required to write any Short Note on any 4 out of 5. 4 X 3 = 12 Marks

a. Conversion Cost 3

Type your answer here

This term is defined as the sum of direct wages, direct expenses and overhead costs of converting raw material to the finished products or converting a material from one stage of production to another stage. In other words, it means the total cost of producing an article less the cost of direct materials used. The cost of indirect materials and consumable stores are included in such cost. The compilation of conversion cost is useful in a number of cases. Where cost of direct materials is of fluctuating nature, conversion cost is used to cost control purpose or for any other decision making. In contracts/jobs where raw materials are on account of the buyers conversion cost takes the place of total cost in the books of the producer. Periodic comparison/review of the conversion cost may give

Mock Test Paper with Model Answers for June 2022 Online Examination – Inter/P08-CAC/S1

		sufficient insight as to the level of efficiency with which the production unit is operating.	
	b.	Replacement Cost	3
		<p>Type your answer here</p> <p>Replacement cost is the cost of an asset in the current market for the purpose of replacement. Replacement cost is used for determining the optimum time of replacement of an equipment or machine in consideration of maintenance cost of the existing one and its productive capacity. This is the cost in the current market of replacing an asset. For example, when replacement cost of material or an asset is being considered, it means that the cost that would be incurred if the material or the asset was to be purchased at the current market price and not the cost, at which it was actually purchased earlier, should be taken into account.</p>	
	c.	Normal Process Loss	3
		<p>Type your answer here:</p> <p>It is the loss which is unavoidable on account of inherent nature of production process. Such loss can be estimated in advance on the basis of past experience or available data. The normal process loss is recorded only in terms of quantity and the cost per unit of usable production is increased accordingly. Where scrap possesses some value as a waste product or as raw material for an earlier process, the value thereof is credited to the process account. This reduces the cost of normal output; process loss is shared by usable units.</p>	
	d.	Purchase Budget	3
		<p>Type your answer here:</p> <p>The purchase budget establishes the quantity and value of the various items of materials to be purchased for delivery at specified points of time during the budget period taking into account the production schedule of the concern and the inventory requirements. It takes into account the requirements for the entire budget plan as per the sales, materials, maintenance, research and development, and capital budgets. Purchases may be required to be made in respect of direct and indirect materials, finished goods for resale, components and parts, and purchased services. Before incorporation in the purchase budget, these purchase requirements should be suitably ascertained. Purchase budget also includes material procurement budget.</p>	
	e.	Cash Break-Even Point	3
		<p>Type your answer here</p> <p>When break-even point is calculated only with those fixed costs which are payable in cash, such a break-even point is known as cash break-even point. This means that depreciation and other non-cash fixed costs are excluded from the fixed costs in computing cash break-even point. Its formula is: $\text{Cash break even point} = \text{Cash fixed costs} / \text{Contribution per unit}.$</p>	
<p>Section D</p> <p>You are required to answer all the questions in this section.</p> <p>Instructions: Each question is followed by a space where you are required to type your answer.</p>			12 Marks
9.		<p>There is an agrarian economy, with over 50% of the population dependent on agriculture for their livelihood. As of 2022, agriculture and its allied sector accounted for 16% of the country's gross domestic product (GDP). The performance of this sector drives the prices and market demand for essential commodities. The accessibility and quality of agricultural machinery positively impact the productivity and output of the farming sector.</p> <p>The country's agricultural equipment industry has a diverse product portfolio which caters to requirements across the value chain. However, tractors, tractor-driven devices and tillers are the main</p>	

products of the organized market. Based on products, the market can be segmented into tractors, rotavators, power tillers, threshers, and others. The tractor segment dominated the market with a revenue share of 81% in 2022. The Tractors also enjoy an export market. To improve the productivity of the limited resources of both land and potable water, the farmers are attempting to move towards the more powerful tractors.

There has been a sustained increase in the adoption of mechanization in an attempt to ensure greater return on investment (RoI) and sustainability of agriculture. Mechanisation primarily driven by increased use of tractors, which is replacing manual and animal labour. The growth in domestic volumes has been driven by the desire to enhance productivity. Tractors and related equipment have low penetration, which shows a high growth potential.

The tractors, while powerful are only as effective as the power they can harness. Since farms have access to limited power sources, it is imperative that the power sources be efficiently utilized. Further adding to the challenge, the tractors which consume power require a mobile power source that can keep up with them. The power-take off is one such way for the tractors to consume power while working on the fields. A power take-off or power takeoff (PTO) is any of several methods for taking power from a power source, such as a running engine, and transmitting it to an application such as an attached implement or separate machine. Further, the Semi-permanently mounted power take-offs can also be found on industrial and marine engines. However, quality power take-offs are fast gaining acceptance in India among tractors. Quality PTOs are also considered to be safer for the farmers. PTOs are a common source of injury among farmers and thus, the safety standards must be highly enforced in order to ensure that the chances of such accidents are reduced to a minimum.

The PTO Division of XYZ manufacturing company power takes off units for the farm equipment business. The PTO division has a newly renovated, automated plant M and an older, less- automated plant P. Both plants produce the same power take-off units for farm tractors that are sold to most domestic and foreign tractor manufacturers.

The PTO division expects to produce and sell 1,92,000 power take off units during the coming year. The division production manager has the following data available regarding the unit costs, unit prices and production capacity for the two plants:

- All fixed costs are based on normal year of 240 working days. Usually, the PTO division does not work on sundays and other national holidays. When the number of working days exceed 240 days, variable manufacturing costs increase by Rs. 3 per unit in M and Rs. 8 per unit in P. The cost of labor in P is higher as the machine itself is older and requires specialized technical skills to be operated in the best manner. Capacity for each plant is 300 working days. The remaining days are reserved for scheduled maintenance and safety checks.
- XYZ manufacturing charges each of its plant a per unit fee for administrative services such as payroll, general accounting and purchasing, because management considers these services to be a function of work performed at the plants. The consideration for the administrative fee also includes a visit monthly by the security supervisor and monthly safety training drills which are held at both plants to ensure the workers are kept up to date on the security protocols while also ensuring that the chances for accidents are minimised. For each of the plants at M and P the fee is Rs. 6.50 and represents the variable portion of general administrative expenses.
- Wishing to maximize the higher unit profit at Pun, the PTO's production manager has decided to manufacture 96000 units at each plant. This production plan results in P's operating at capacity and M's operating at its normal volume. XYZs corporate controller is not happy with this plan, because she does not believe it represents optimal usage of PTO's plants.
