

FINAL EXAMINATION
Syllabus 2016

Paper 14: STRATEGIC FINANCIAL MANAGEMENT (SFM)

Time Allowed: 3 Hours

Full Marks: 100

There are Sections A, B, C and D to be answered subject to instructions given against each.

Section A					20 X 1 = 20 Marks
You are required to answer all the questions. Each question carries 1 mark. Instructions: Each question is followed by 4 Answer choices and only one is correct. You are required to select the choice which according to you represents the correct answer.					
1.	a.	In case of divisible projects, which of the following can be used to attain maximum NPV?			
		(i)	Feasibility Approach		
		(ii)	Internal Rate of Return		
		(iii)	Profitability Index Approach	A	
		(iv)	Any of the above		
	b.	Where the costs and revenues change at differing rates of inflation, it is known as _____.			
		(i)	differential inflation	A	
		(ii)	general inflation		
		(iii)	synchronized inflation		
		(iv)	specific inflation		
	c.	Which of the following items can the lessee can claim as an expenditure ?			
		(i)	Lease rent		
		(ii)	Insurance and repairs		
		(iii)	Maintenance expenses		
		(iv)	All the above	A	
	d.	ABC Leasing Company expects a minimum yield of 10% on its investment in the leasing business. It proposes to lease a machine costing Rs. 5,00,000 for 10 years. If yearly lease payments are received in advance, the lease rental to be charged by the company for lease will be:			
		(i)	Rs. 81,372		
		(ii)	Rs. 72,370		
		(iii)	Rs. 73,975	A	
		(iv)	Rs. 84,130		
	e.	XYZ Ltd. has a debt-equity mix of 30/70. If XYZ Ltd.'s debt beta for its activity (or projects) is 1.21, what is the beta for its equity?			
		(i)	1.65		
		(ii)	1.52		
		(iii)	1.60	A	
		(iv)	1.68		

Mock Test Paper with Model Answers for June 2022 Online Examination – Final/P14-SFM/S1

f.	Assume CAPM is correct, you are holding a stock, which has a beta of 1.5 and is currently in equilibrium. The required return on stock is 12% and the expected return on the market is 10%. Suddenly due to economic conditions, the expected return on the market increases by 20%. If nothing else changes, how much will this affect your required premium?	
(i)	+20%	
(ii)	-25%	
(iii)	+25%	A
(iv)	+30%	
g.	Markowitz Portfolio Theory is most concerned with _____.	
(i)	the elimination of systematic risk	
(ii)	the effect of diversification on portfolio risk	A
(iii)	the identification of systematic risk	
(iv)	active portfolio management to enhance return	
i.	ABC Ltd. intends to invest Rs. 50 lakhs in commercial paper and has received the following quotes from primary leader: Bid 5.30%, Ask 5.00%. if the maturity period of the Commercial Paper is 45 days, the investment amount will be (assume day count basis as "actual/365")	
(i)	Rs.49,67,541	
(ii)	Rs. 49,69,367	A
(iii)	Rs. 49,68,454	
(iv)	None of the above	
j.	According to CAPM assumptions, variances, expected returns, and covariance of all assets are _____.	
(i)	identical	A
(ii)	not identical	
(iii)	fixed	
(iv)	variable	
k.	An average return of portfolio divided by its standard deviation is classified as _____.	
(i)	Jensen's alpha	
(ii)	Treynor's variance to volatility ratio	
(iii)	Sharpe's reward to variability ratio	A
(iv)	Treynor's reward to variability ratio	
l.	The portfolio's return is 14%. The market's and fund's returns standard deviations are 4 and 3. The fund's beta value is 1.5. The risk free rate of return is 5%. the Treynor index is _____.	
(i)	6.0	A
(ii)	5.1	
(iii)	0.48	
(iv)	7.0	
n.	PQR Company's equity share is expected to provide a dividend of Rs. 3 and fetch a price of Rs. 40 a year. What price would it sell for now if investors' required rate of return is 15%?	
(i)	Rs. 35.50	
(ii)	Rs. 38.27	
(iii)	Rs. 37.39	A
(iv)	Rs. 40.00	

Mock Test Paper with Model Answers for June 2022 Online Examination – Final/P14-SFM/S1

	o.	The dividend policy of a firm and its market price of share is determined by_____.	
	(i)	earnings per share	A
	(ii)	price earnings ratio	
	(iii)	book value	
	(iv)	dividend yield	
	p.	The risk that arise due to fluctuations in the exchange rates when the normal trading transactions take place in the normal course of international trade is: _____.	
	(i)	translation risk	
	(ii)	transaction risk	A
	(iii)	economic risk	
	(iv)	exchange rate risk	
	q.	The process of separating the interest and principal portions of a security, which then may be sold separately in secondary market is known as _____>	
	(i)	strips	A
	(ii)	straps	
	(iii)	straddle	
	(iv)	strangle	
	r.	If the amount and timing of a foreign currency outflow are both uncertain, then the best hedging technique will be to _____.	
	(i)	buy a put option	
	(ii)	sell a call option	
	(iii)	buy a call option	A
	(iv)	buy a forward contract	
	s.	Combination of two fixed floating currency swaps to form a fixed to fixed currency swap is called as _____.	
	(i)	circus swap	A
	(ii)	forward swap	
	(iii)	extendible swap	
	(iv)	vanilla swap	
	t.	Formula written as market risk premium divided by standard deviations of returns on market portfolio is used to calculate _____.	
	(i)	security market line	
	(ii)	capital market line	A
	(iii)	systematic risk	
	(iv)	None of the above	
Section B			
You are required to answer all the questions. Each question carries 2 mark.			10 X 2
Instructions: Each question is followed by a space where you are required to type your answer.			= 20
			Marks
2.	a.	Suppose you invest Rs. 78.35 at an interest rate of 5 percent per year. How long will it take your investment to grow to Rs. 100?	
		Type your answer here 5 years	
	b.	Project with an initial investment of Rs 50 lakhs and life of 10 years, generates a CFAT of Rs 10 lakhs	

Mock Test Paper with Model Answers for June 2022 Online Examination – Final/P14-SFM/S1

		per annum. What will be its payback reciprocal?	
		Type your answer here 20%	
	c.	In the case of NPV method, what is the re-investment rate?	
		Type your answer here Cost of Capital	
	d.	If a mutual fund holds Rs. 205 lakh worth of securities and Rs.30 lakh cash, and Rs. 6 lakh of liabilities and Rs. 20 lakh outstanding at the close of the trading day, compute the Net Asset Value.	
		Type your answer here Rs. 11.45	
	e.	ABC Ltd. announced a rights issue of four shares of Rs. 100 each at a premium of 160% for every five shares held by the existing shareholders. The market value of the shares at the time of rights issue is Rs. 395. The value of right is:	
		Type your answer here Rs.60	
	f.	Assume that Stock X has factor sensitivities (betas) of 0.9 to the inflation portfolio, 1.2 to the industrial production portfolio, and -0.7 to the risk bearing portfolio. Risk free rate of interest is 8%. The required rate of return is 13% on a portfolio with sensitivity to inflation. The required rate of return is 10% on a portfolio with sensitivity to industrial production. The required rate of return is 6% on a portfolio with sensitivity to degree of risk aversion. Compute the required rate of return according to APT.	
		Type your answer here 16.3%	
	g.	The market returns standard deviation is 15. The X stock return is 25%. The riskless rate of interest is 5%. The risk premium of the Stock X is:	
		Type your answer here 20%	
	h.	Mr. A is bearish on the stock of XYZ Ltd. Therefore, he purchases five put option contracts on XYZ shares for a premium of Rs. 3. The exercise price is Rs. 41 and it has a maturity period of three months. The current market price of the stock is Rs. 40. The market lot is 100. If Mr. A is correct and XYZ's share price falls to Rs. 30, how much profit will he earn over a period of three-months?	
		Type your answer here Rs. 4,000	
	i.	A dollar denominated bond issued in the U.S. by a non-American company that makes all payments to the investors in U.S. dollars. Identify the bond.	
		Type your answer here Yankee Bond	
	j.	The XYZ stock price on 21 st August 2020 is Rs. 869 and the owner of the share has entered into a call option agreement for six months at a strike price of Rs. 950. The risk free rate of interest and compounded standard deviation are assumed to be 10% and 0.5 respectively. Compute the value of the call option using the Black-Scholes formula.	
		Type your answer here Rs. 110.4	
Section C			4 X 12
You are required to answer any 4 out of 6 questions in this section			= 48
Instructions: Each question is followed by a space where you are required to type your answer.			Marks
3.	a.	ABC Ltd. is thinking of investing in a project costing Rs. 20 lakhs. The life of the project is five years and the estimated salvage value of the project is zero. Straight line method of charging depreciation is followed. The tax rate is 50%. The expected cash flows before tax are as follows:	

		<table><tr><td>Year-end</td><td>1</td><td>2</td><td>3</td><td>4</td><td>5</td></tr><tr><td>Estimated Cash Flow Before Depreciation and Tax (Rs. And R Ltd.=0.50 An investor is interested in investing Rs. 15,00,000 in these securities. Suggest portfolio to minimize the risk.</p>		K Ltd.	R Ltd.	Average Return	12%	15%	SD of Return	6%	3%	3
	K Ltd.	R Ltd.										
Average Return	12%	15%										
SD of Return	6%	3%										
		Type your answer here Invest total amount of Rs.15,00,000 in the equity shares of R Ltd. ROUGH WORK If $r = 0.50$ Let K Ltd. = 1 Let R Ltd. = 2 $W_1 = [(SD_2)^2 - r(SD_1)(SD_2)] / [(SD_1)^2 + (SD_2)^2 - 2r(SD_1)(SD_2)] = 0$ Or, $W_1 = [(0.03)^2 - (0.05)(0.06)(0.03)] / [(0.06)^2 + (0.03)^2 - 2(0.50)(0.06)(0.03)] = 0$										
6.	a.	A gold company needs 1,500 ounces of gold after eight months. The current price per ounce of gold is Rs. 4,200. It is expected that after 8 months, the price per ounce of gold is likely to touch Rs. 4,900. The company wants to hedge against the rising price for its requirement after 8 months. The 8-month futures contract price is now traded Rs. 4,500 per ounce. The size of a futures contract is 100 ounce.										
	(i)	If the cost of capital, insurance and storage is 13% p.a., examine whether it is beneficial for the gold company to buy now.	2									
		Type your answer here Decision: It is not beneficial to buy now. ROUGH WORK Fair Price of the futures contract: If the cost of carry (including interest, insurance and storage) is 13%, the fair price of the futures contract is = $So e^{rt} = 4200 e^{8/12 \times 0.13} = 4200 \times 1.091 = \text{Rs.} 4,582.20$. It implies that if the company buys gold today to be used after eight months, it would effectively cost Rs. 4,582.20.										
	(ii)	What strategy can the firm adopt if the upper limit to buying price is Rs. 4,500?	2									
		Type your answer here Strategy: Since futures are trading at Rs. 4,500, it can lock up in the price of around Rs. 4,500 through a long										

	<p>hedge. Under the long hedge the company would buy the futures on gold today and sell it eight months later.</p> <p>Expected Result: The firm would end up paying a price of Rs. 4,500.</p>	
(iii)	<p>If the company decided to hedge through futures, what will be the effective price it would pay for gold if at the time of lifting the hedge the spot and future prices are: Spot price = Rs. 4,340; Futures = Rs. 4,600.</p>	5
	<p>Type your answer here Effective cost of buying (Rs. 43,40,000 - Rs. 1,00,000) Rs. 42,40,000 Effective price per ounce (Rs. 42,40,000/1,000 ounce) Rs. 4,240 ROUGH WORK If the company adopts the strategy mentioned in (a)(ii), the effective price to be paid by the firm in the two cases of rise and fall in spot values is calculated as follows: Quantity of gold to be hedged 1,000 ounce Size of futures contract 100 ounce Number of futures contract bought = 1,000 / 100 10 contracts Futures price Rs. 4,500 Value of Futures Bought = Rs. 4,500 x 10 x 100 Rs. 45,00,000 Strategy: Eight months later the company would unwind its futures position and buy its requirement from the spot market. Expected Result: 1. Futures sold at price Rs. 4,600 2. Value of futures sold = Rs. 4,600 x 10 x 100 Rs. 46,00,000 3. Gain on Futures (Rs. 46,00,000 - Rs. 45,00,000) Rs. 1,00,000 4. Spot Price Rs. 4,340 5. Actual cost of buying for 1,000 ounce Rs. 4,340 x 1,000 Rs. 43,40,000 6. Effective cost of buying (Rs. 43,40,000 - Rs. 1,00,000) Rs. 42,40,000 7. Effective price per ounce (Rs. 42,40,000/1,000 ounce) Rs. 4,240</p>	
b.	<p>The following data relates to ABC Ltd.'s shares: Current price per share Rs.180. Price per share in future market- 6 months: Rs.195. It is possible to borrow money in the market @12% p.a. Determine the theoretical minimum price of a 6-month forward contract. Explain if any arbitrage opportunity exists.</p>	3
	<p>Type your answer here Theoretical price of futures = Rs.190.80 Arbitrage gain = Rs.4.20 ROUGH WORK Theoretical price of futures: spot price + carrying cost – returns = 180 + 180 x 0.06-0 = Rs.190.80 Arbitrage opportunity can be made by entering into futures sale contract of the share @Rs.195 maturity 6 months and buying the share at current price of Rs. 180 Borrow Rs.180 @12%p.a. for six months. Purchase one share. Realization from futures contract after six months=Rs. 195 Repay the borrowings along with interest: Rs.180(1.06) = Rs.190.80 Profit = Rs.195 – Rs.190.80 = Rs.4.20</p>	

7.	a.	<p>A company has estimated the unit variable cost of a Product to be Rs. 10, and the selling price is Rs. 15 per unit. Budgeted sales for the year are 20,000 units. Estimated fixed costs are as follows:</p> <table><tr><td>Fixed costs p.a. (Rs.)</td><td>50,000</td><td>60,000</td><td>70,000</td><td>80,000</td><td>90,000</td></tr><tr><td>Probability</td><td>0.1</td><td>0.3</td><td>0.3</td><td>0.2</td><td>0.1</td></tr></table> <p>What is the probability that the company will equal or exceed its target profit of Rs. 25,000 for the year.</p>	Fixed costs p.a. USD/INR	Put	44.8000	Rs. 0.04	19 September, 2022																								
	(i)	<p>A trader sells an at-the-money spot straddle expiring at three months (19th July, 2022). Determine the gain or loss if three months later the spot rate is EURO/USD 1.2900.</p>	5																									
		<p>Type your answer here Net loss = \$0.015 per EURO ROUGH WORK Straddle is a portfolio of a Call and a Put option with identical Strike price. A trader sells Straddle of at the Money Straddle by selling a call option and put option with strike price of USD per EURO. He will receive premium of \$ 0.035+\$0.040=\$ 0.075. At the expiry of three months spot rate is 1.2900 i.e. higher than Strike Price. Hence, buyers of the call option will exercise the option, but buyer of Put option will allow the option to lapse. Profit or loss to a trader is: Premium received = \$0.075 Loss on call option exercised (1.2900-1.200) = \$0.090 So the Net loss is \$(0.075-0.090) = \$0.015 per EURO.</p>																										
	(ii)	<p>Which strategy gives a profit to the dealer if five months later (19th September, 2022) expected spot rate is USD/INR 45.00? Also calculate profit for a transaction USD 1.5 million.</p>	4																									
		<p>Type your answer here BUY Strategy i.e. either Call or Put: Net Gain or Profit = Rs. 1,20,000</p>																										

		ROUGH WORK BUY Strategy i.e. either Call or Put: When price is expected to go up then call option is beneficial, On 19th April, 2022 to pay premium 15,00,000 @Rs.0.12 i.e. Rs. 1,80,000 On 19th September, 2022 exercise call option to gain 15,00,000 @Rs.0.20 Rs. 3,00,000 Net Gain or Profit Rs. 1,20,000	
8.	You are required write Short Notes on any 4 out of 5 questions.		4 X 3 = 12 Marks
	a.	Differentiate between certainty equivalent approach and Risk Adjusted Discount Rate method	3
		Type your answer here The risk adjusted discount rate method (RADR) is similar to the NPV. It is defined as the present value of the expected or mean value of future cash flow distributions discounted at a discount rate, k , which includes a risk premium for the riskiness of the cash flows from the project. The certainty equivalent method (CE) adjusts for risk directly through the expected value of the cash flow in each period and then discounts these risk adjusted cash flows by the risk free rate of interest, R_f . The major difference between the RADR and CE methods is that the RADR method adjusts for risk in the discount rate while the CE method adjusts the cash flows for risk and then discounts at a risk-free rate of interest.	
	b.	Directional Margin Traders	3
		Type your answer here These traders have a slightly longer term view on specific commodities compared to speculators who typically operate at the short end of the market. Margin traders use futures as a proxy for buying the commodity in the spot market as the benefit of margin trading is available in the futures market. Instead of locking up their entire capital in holding to a spot position, the margin traders use futures as a proxy for spot positions by paying a margin. Margin traders are not only willing to wait till expiry but are also willing to take a longer period contract and even to bear the rollover cost for carrying forward the position. Margin traders normally do not rely too much on technicals but have a very strong fundamental premise due to which they are willing to bear the roll cost to carry the position longer. The trades of these margin traders typically give hints to traders and analysts regarding which commodities are attracting long term interest and acting as a lead indicator of underlying shifts.	
	c.	Problems associated with diversification of portfolio with too many assets	3
		Type your answer here The problems associated with diversification of portfolio with too many assets are as follows: (i) Poor performers – when numerous stocks are involved, the investor may sometimes also buy stocks that will not yield adequate return. (ii) Information inadequacy – if there are too many securities in a portfolio, it is difficult for the portfolio manager to have all information about their individual performance. (iii) High research costs – when a large number of stocks are included in a portfolio, the returns and risks associated with individual stocks should be analyzed before their inclusion. For this, a lot of information has to be gathered and this involves high costs. (iv) High transaction costs – when small quantities of stocks are purchased frequently, the investor has to incur higher transaction cost than for the purchase of large blocks at less frequent intervals.	
			3
	d.	Assumptions of CAPM	
		Type your answer here Following are the assumptions of CAPM:	

		(i) Efficient capital market exists. (ii) Investors, may borrow and lend without limit at risk-free rate of interest. (iii) All investors have the same expectations about the risk and return. (iv) No transaction costs involved. (v) Capital markets are in equilibrium.																															
			3																														
	e.	Stages of currency swap																															
		Type your answer here A currency swap consists of three stages: (i) A spot exchange of principal – this forms part of the swap agreement as a similar effect can be obtained by using the spot foreign exchange market. (ii) Continuing exchange of interest payments during the terms of the swap – this represents a series of forward foreign exchange contracts during the term of the swap contract. The contract is typically fixed at the same exchange rate as the spot rate used at the outset of the swap. (iii) Re-exchange of principal on maturity – in a currency swap the principal sum is usually exchanged in one of the following manner: <ul style="list-style-type: none">• At the start• At the end• At a combination of start and end• Neither

9.		<p>Waste generation has tremendously increased in the last decade with rapid urbanization and industrialization where it has reached a humongous figure of 62 million tonnes (MT)/year in India. Out of the total waste generated only 43 MT is collected, 11.9 MT is treated and rest of the 31 MT is simply dumped. Well it can be better disposed of with segregation and recycling to boost economy as well as benefit the environment. During the recent past, the management of solid waste has received considerable attention from the Central and State Governments and local (municipal) authorities in India. A number of partnerships/alliances are found to exist in the field of solid waste management in Indian cities. These alliances are public-private, community-public and private-private arrangements.</p> <p>S Ltd, a large profit making company is considering the installation of a machine to process the waste produced by one of its existing manufacturing process to be converted into a marketable product. At present, the waste is removed by a contractor for disposal; on payment by the company of Rs. 50 lacs per annum for the next four years. The contract can be terminated upon installation of the aforesaid machine on payment of a compensation of Rs. 30 lacs before the processing operation starts. This compensation is not allowed as deduction for tax purposes. The machine required for carrying out the processing will cost Rs. 200 lacs to be financed by a loan repayable in 4 equal instalments commencing from the end of year 1. The interest rate is 16% per annum. At the end of the 4th year, the machine can be sold for Rs. 20 lacs and the cost of dismantling and removal will be 15 lacs.</p> <p>Sales and direct costs of the product emerging from the waste processing for 4 years are estimated as under:</p> <table><tr><td></td><td colspan="4">(Rs. in lakhs)</td></tr><tr><td>Year</td><td>1 (Rs.)</td><td>2 (Rs.)</td><td>3 (Rs.)</td><td>4 (Rs.)</td></tr><tr><td>Sales</td><td>322</td><td>322</td><td>418</td><td>418</td></tr><tr><td>Material consumption</td><td>30</td><td>40</td><td>85</td><td>85</td></tr><tr><td>Wages</td><td>75</td><td>75</td><td>85</td><td>100</td></tr><tr><td>Other expenses</td><td>40</td><td>45</td><td>54</td><td>70</td></tr></table>		(Rs. in lakhs)				Year	1 (Rs.)	2 (Rs.)	3 (Rs.)	4 (Rs.) b.	What will be the net present value on installing the machine for processing the waste material?	4																																																																																
	<p>Type your answer</p> <p>NPV= Rs.73.658 lakhs</p> <p>ROUGH WORK</p> <p style="text-align: center;">Statement of Incremental Cash Flow and Calculation of NPV</p>																																																																																	

	Years	(Rs. in lakhs)				
		0 (Rs.)	1 (Rs.)	2 (Rs.)	3 (Rs.)	4 (Rs.)
	Stock of material	(20)	(35)	-	-	-
	Compensation for contract	(30)	-	-	-	-
	Contract payment saved	-	50	50	50	50
	Tax on contract payment		(25)	(25)	(25)	(25)
	Incremental profit (after tax)		35	35	55	47
	Depreciation added back		50	38	28	21
	Loan repayment		(50)	(50)	(50)	(50)
	Profit on sale of machinery	-	-	-	-	5
	Incremental cash flow	(50)	25	48	58	48
	Present value factor	1.00	0.870	0.756	0.658	0.572
	Net present value of cash flows	(50)	21.75	36.288	38.164	27.456
NPV = Rs. 123.658- Rs. 50 = Rs.73.658 lakhs						
Working Notes:						
(1) Material stock increases are taken in cash flow because it will lead to cash outflow.						
(2) Sale of machinery:						
Sale Proceeds = 20 lakhs						
Less: Dismantling = 15 lakhs						
Profit on sale of machinery = 5 lakhs						
c.	Advise the management on the desirability of installing the machine for processing the waste.					2
	Type your answer					
	Since the net present value of cash flows is Rs. 73.658 lakhs, which is positive therefore the companies should install the machine for processing the waste material.					
d.	Enumerate on the concept of Social-Cost Benefit Analysis.					2
	Type your answer					
	Social cost benefit analysis is a part of process of evaluating the proposal regarding undertaking a project. The concept of social cost benefit analysis is that while evaluating the proposal regarding the investment of a project, the entrepreneur should consider not only its financial soundness and technical feasibility but also make cost benefit analysis of the project from the point of society and economy as a whole.					

END
