## Paper 15- Strategic Cost ManagementDecisionMaking

## Paper-15: Strategic Cost Management- Decision Making

This paper contains two sections A and $\mathbf{B}$. Section $\mathbf{A}$ is compulsory and contains questionNo. 1 for 20 marks. Section B contains question Nos. 2 to 8, each carrying 16 marks.Answer any five questions from Section B.

```
Section - A [20 Marks]
```

1. Choose the most appropriate answer to the following questions giving justification
[10×2=20]
(i) Ink Ltd. makes leather purses. It has drawn up the following budget for its next financial period:
Selling price per unit ₹11.60; Variable production cost per unit ₹3.40; Sales commission $5 \%$ of selling price; Fixed production costs ₹ $4,30,500$; Fixed selling and administration costs ₹ $1,98,150$; Sales 90,000 units. The margin of safety represents:
(a) $5.6 \%$ of budgeted sales
(b) $8.3 \%$ of budgeted sales
(c) $11.6 \%$ of budgeted sales
(d) $\mathbf{1 4 . 8 \%}$ of budgeted sales
(ii) A company uses a predetermined overhead recovery rate based on machine hours. Budgeted factory overhead for a year amounted to ₹7,20,000, but actual factory overhead incurred was ₹ $7,38,000$. During the year, the company absorbed ₹7,14,000 of factory overhead on $1,19,000$ actual machine hours. What was the company's budgeted level of machine hours for the year?
(a) 116098
(b) 119000
(c) 120000
(d) 123000
(iii) A company uses standard absorption costing to value inventory. Its fixed overhead absorption rate is ₹12 per labour hour and each unit of production should take four labour hours. In a recent period when there was no opening inventory of finished goods, 20000 units were produced using 100000 labour hours. 18000 units were sold. The actual profit was ₹464000. What profit would have been earned under a standard marginal costing system?
(a) ₹ 368000
(b) ₹ 440000
(c) ₹ 344000
(d) ₹ 560000

## Answer to MTP_Final_Syllabus 2016_June2020_Set 1

(iv) $X$ plc intends to use relevant costs as the basis of the selling price for a special order: the printing of a brochure which requires a particular type of paper that is not regularly used by $X$ plc although a limited amount is in X plc's inventory which was left over from a previous job. The cost when $X$ plc bought this paper last year was ₹ 15 per ream and there are 100 reams in inventory. The brochure requires 250 reams. The current market price is ₹ 26 per ream and resale value is ₹ 10 per ream.

The relevant cost of the paper to be used in printing the brochure is:
(a) ₹ 2500
(b) ₹4900
(c) ₹ 5400
(d) ₹ 6500
(v) Alpha uses decision tree analysis to evaluate potential projects. The company has been looking at the launch of a new product which it believes has a $70 \%$ probability of success. The company is however considering undertaking an advertising campaign costing ₹ 50,000 , which would increase the probability of success to $95 \%$. If successful, the product would generate income of $\mathbf{F} 200000$ otherwise $₹ 70000$ would be received. What is the maximum that the company would be prepared to pay for the advertising?
(a) ₹32500
(b) ₹ 29000
(c) ₹ 17500
(d)₹50000
(vi) A company uses standard absorption costing. The following information was recorded by the company for October:

|  | Budget | Actual |
| :--- | ---: | ---: |
| Output and sales (units) | $\mathbf{8 7 0 0}$ | $\mathbf{8 2 0 0}$ |
| Selling price per unit | ₹26 | ₹31 |
| Variable cost per unit | ₹10 | ₹10 |
| Total fixed overheads | ₹34800 | ₹37000 |

The sales price variance for October was:
(a) ₹38500 adverse
(b) ₹38500 favourable
(c)₹41000 adverse
(d) ₹41000 favourable
(vii)Based on the data given, what is the amount of the overhead under/over absorbed?

Budgeted overheads
Budgeted machine hours
Actual machine hours
Actual overhead
₹493200
10960
10493
₹514157
(a) ₹20957 under-absorbed
(b) ₹20957 over-absorbed
(c) ₹41972 over-absorbed
(d) ₹41972under-absorbed
(viii)Bunny uses a JIT system and backflush accounting. It does not use a raw material stock control account. During May, 8000 units were produced and sold. The standard cost per unit is ₹100; includes materials of ₹45. During May, ₹480000 of conversion costs were incurred. The debit balance on the cost of goods sold account for May was:
(a) ₹ 800000
(b) ₹ 840000
(c) ₹ 880000
(d) ₹920000
(ix) A company manufactures two products using common handling facility. The total budgeted material handling cost is ₹ 60000 . The other details are:

| Particulars | Product $X$ | Product Y |
| :--- | :---: | :---: |
| Number of units produced | 30 | 30 |
| Material moves per product line | 5 | 15 |
| Direct labour hours per unit | 200 | 200 |

Under ABC System, the material handling costs to be allocated to Product X (per unit) would be:
(a) ₹ 1000
(b) ₹ 500
(c) ₹ 1500
(d) ₹ 2500
( $x$ ) The selling price of Product $P$ is set at $₹ 1500$ for each unit and sales for the coming year are expected to be 500 units. If the company requires a return of $15 \%$ in the coming year on its investment of ₹ 1500000 in product $P$, the target cost for each unit for the coming year is:
(a) ₹930
(b) ₹990
(c) ₹ 1050
(d) ₹ 1110

Answer:

1. (i) (b) $8.3 \%$ of budgeted sales

Unit contribution $=₹(11.60-3.40-0.58)=₹ 7.62$
$B E P=(430500+198150) / 7.62=82500$
Margin of safety $=(90000-82500) / 90000=8.3 \%$
(ii) (c) 120000

Overhead absorbed $=$ Actual hours $\times$ Pre-determined overhead rate Or, $714000=119000 \times$ Pre-determined overhead rate Or, Pre-determined overhead rate $=714000 / 119000=₹ 6$ Budgeted overhead $=$ Budgeted machine hours $\times$ budgeted overhead rate Or, Budgeted machine hours $=720000 / 6=120000$ hours
(iii) (a) ₹368000

Standard absorption costing will include ₹96000 of the period's overhead (2000 units $\times 4$ labour hours $\times$ ₹ 12 per hour) in the closing inventory valuation. Under standard marginal costing, ₹96000 would be charged against the period's profit resulting in profit being reduced by ₹96000 to ₹368000.
(iv) (b) ₹4900

The original purchase price is a sunk cost and therefore not a relevant cost. The relevant cost of the materials in stock is ₹ 1000 ( 100 reams @ ₹ 10 net realizable value). An additional 150 reams must be purchased for ₹3900 (150 x ₹26) resulting in a relevant cost of ₹4900.
(v) (a)₹32500

Expected income with advertising $=(200000 \times 0.95)+(70000 \times 0.05)=₹ 193500$ Expected income without advertising $=(200000 \times 0.7)+(70000 \times 0.3)=₹ 161000$ The maximum amount the company should pay for advertising is the increase in expected value of ₹ 32500 (193500-161000).
(vi) (d)₹41000 favourable

Sales price variance =(actual margin - budgeted margin) $\times$ actual sales volume (₹ $17-₹ 12) \times 8200=₹ 41000$ favourable Note that fixed overhead rate per unit is (₹34800/8700) $=$ ₹ 4
Actual margin $=31-10-4=₹ 17$
Budgeted margin $=26-10-4=$ ₹ 12
(vii) (d)₹41972 under-absorbed

Overhead absorption rate $=493200 / 10960=₹ 45$
Overhead absorbed $=10493 \times 45=₹ 472185$
Overhead incurred $=$ ₹ 514157
Under absorbed = ₹41972
(viii) (b) ₹840000

|  | ₹ |
| :--- | :---: |
| Cost of goods sold | 800000 |
| Less: Material cost | $\underline{360000}$ |
| Conversion cost allocated | 440000 |
| Conversion cost incurred | $\underline{480000}$ |
| Excess charged to Cost of goods sold A/c | 40000 |

## Answer to MTP_Final_Syllabus 2016_June2020_Set 1

$$
\text { Total debit on Cost of goods sold A/c = ₹800000 }+₹ 40000=₹ 840000
$$

(ix) (b)₹500

Total moves in material handling $=5+15=20$
Percentage move for Product A $=5 / 20=25 \%$

Material handling cost to be allocated to Product A $=60000 \times 25 / 100=₹ 15000$

$$
\text { Or, }=₹ 15000 / 30 \text { units }=₹ 500 \text { p.u. }
$$

(x) (c)₹ 1050

|  |  | $₹$ |
| :--- | :--- | :--- |
| Sales revenue | $(500$ units $\times ₹ 1500)$ | 750000 |
| Less: Return on investment | $(₹ 1500000 \times 15 / 100)$ | $\underline{225000}$ |
| Total cost allowed |  | $\underline{525000}$ |
| Target cost per unit | (₹525000/500 units) | $₹ 1050$ |

Section - B
Answer any fivequestions.
$[16 \times 5=80]$
2. (a) Amar Ltd. produces 4 products $P, Q, R$ and $S$ by using three different machines $X, Y$ and Z. Each machine capacity is limited to 6000 hours per month. The details given below are for July-

| Particulars | P | Q | R | S |
| :--- | :---: | :---: | :---: | :---: |
| Selling Price p.u. (₹) | 10,000 | 8,000 | 6,000 | 4,000 |
| Variable Cost p.u. (₹) | 7,000 | 5,600 | 4,000 | 2,800 |
| Machine Hours required p.u. |  |  |  |  |
| Machine X | 20 | 12 | 4 | 2 |
| Machine Y | 20 | 18 | 6 | 3 |
| Machine Z | 20 | 6 | 2 | 1 |
| Expected Demand (units) | 200 | 200 | 200 | 200 |

1. Find out the Bottleneck Activity.
2. Allocate the Machine Hours on the basis of the Bottleneck.
3. Ascertain the profit expected in the month if the monthly Fixed Cost amounts to ₹9,50,000.
4. Calculate the unused spare hours of each machine.
(b) A lodging home is being run in a small hill station with 50 single rooms. The home offers concessional rates during six off-season months in a year. During this period, half of the full room rent is charged. The management's profit margin is targeted at $20 \%$ of the room rent. The following are the cost estimates and other details for the year ending $31^{\text {st }}$ march, 2019 (assume a month to be of 30 days):
(a) Occupancy during the season is $80 \%$, while in the off-season is $40 \%$ only;
(b) Expenses:
₹

| (i) Staff salary (excluding room attendants) | $2,75,000$ |
| :--- | :--- |
| (ii) Repairs to buildings | $1,30,500$ |
| (iii) Laundry and linen | 40,000 |
| (iv) Interior and tapestry | 87,500 |
| (v) Sundry expenses | 95,400 |

(c) Room attendants are paid ₹5 per room-day on the basis of occupancy of the rooms in a month.
(d) Monthly lighting charges are ₹120 per room, except in four months of winter when it is ₹30 per room and this cost is on the basis of full occupancy for a month.

You are required to work out the room rent chargeable per day both during the season and the off-season months, on the basis of the above information.

## Answer:

2. (a)
3. Identification of Bottleneck Activity

| Machine | Time required for products (Demand x M/Hrs p.u.) |  |  |  | Total time reqd (Hrs) | Time Available (Hrs) | Machine Utilization |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | P | Q | R | S |  |  |  |
|  | (a) | (b) | (c) | (d) | (e) $=(\mathrm{a}+\mathrm{b}+\mathrm{c}+\mathrm{d})$ | (f)=given | (g) $=(\mathrm{e} / \mathrm{f})$ |
| X | 4000 | 2400 | 800 | 400 | 7600 | 6000 | 126.67\% |
| Y | 4000 | 3600 | 1200 | 600 | 9400 | 6000 | 156.67\% |
| z | 4000 | 1200 | 400 | 200 | 5800 | 6000 | 96.67\% |

Since Machine $Y$ has the highest machine utilization, it represents the Bottleneck Activity. Hence product, ranking \& resource allocation should be based on contribution per machine hour of Machine $Y$.
2. Allocation of Resources and overall Profit

| Particulars | P | Q | R | S | Total |
| :---: | :---: | :---: | :---: | :---: | :---: |
| (a)Contribution per unit (₹) | 3000 | 2400 | 2000 | 1200 |  |
| (b) Time reqd. in Machine Y (Hrs) | 20 | 18 | 6 | 3 |  |
| (c)Contribution per Machine hour | 150 | 133.33 | 333.33 | 400 |  |
| (d)Rank based on (c) | III | IV | II | 1 |  |
| (e)Allocation of Machine Y time (Hrs) | $\begin{array}{r} 200 \times 20 \\ =4000 \end{array}$ | $\begin{array}{r} 200 \\ \text { (bal.fig.) } \end{array}$ | $\begin{aligned} & 200 \times 6 \\ & =1200 \end{aligned}$ | $\begin{array}{r} 200 \times 3 \\ =600 \end{array}$ | 6000 |
| (f) Production quantity (e/b) | 200 units | 11.11 units | 200 units | 200 units |  |

| (g) Allocation of Machine X time (Hrs) | $\begin{aligned} & 20 \times 20 \\ & =4000 \end{aligned}$ | $\begin{array}{r} 11.11 \times 12 \\ =133.32 \end{array}$ | $\begin{array}{r} 200 \times 4 \\ =800 \end{array}$ | $\begin{array}{r} 200 \times 2 \\ =400 \end{array}$ | 5333.32 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| (h) Allocation of | 200×20 | $11.11 \times 6$ | 200x2 | 200x1 | 4666.66 |
| Machine $Z$ time (Hrs) | $=4000$ | $=66.66$ | $=400$ | $=200$ |  |
| (i) Contribution based on allocation | $\begin{array}{r} 200 \times 3000 \\ =600000 \end{array}$ | $\begin{array}{r} 11.11 \times 2400 \\ =26664 \end{array}$ | $\begin{array}{r} 200 \times 2000 \\ =400000 \end{array}$ | $\begin{array}{r} 200 \times 1200 \\ =240000 \end{array}$ | 1266664 |
| (j) Fixed cost for the month |  |  |  |  | (950000) |
| (k) Profit for the month |  |  |  |  | 316664 |

Spare Capacity:
Machine X $=6000-5333.32=666.68$ hours
Machine $Z=6000-4666.66=1333.34$ hours
(b)

| (1) Calculation of No. of Room days in a year | (Room days) |  |
| :--- | :--- | :---: |
| Season's occupancy | (50 rooms $\times 6$ months $\times 30$ days $\times 80 / 100)$ | 7200 |
| Off-season's occupancy | $(50$ rooms $\times 6$ months $\times 30$ days $\times 40 / 100)$ | $\underline{3600}$ |
| Total room days in a year |  | 10800 |

(2) Calculation of lighting charges

Lighting charges ₹ 120 per room p.m. for 8 months $=₹ 120 / 30$ days $=₹ 4$ per room day Lighting charges ₹30 per room p.m. for 4 months = ₹30/30days = ₹1 per room day

|  |  | (₹) |
| :--- | :--- | :--- |
| During season for 6 months | $(7200 \times 4)$ | 28800 |
| During season for 2 months | $(3600 \times 2 / 6) \times 4$ | 4800 |
| During winter for 4 months | $(3600 \times 4 / 6) \times 1$ | $\underline{2400}$ |
| Total lighting charges p.a. |  | 36000 |

| Computation of Estimated costs for the year ending 31.03 .2019 | $(₹)$ |
| :--- | ---: |
| Salary | 275000 |
| Repairs | 130500 |
| Laundry and linen | 40000 |
| Interior decoration | 87500 |
| Attendants' salary | (10800 room days @ ₹5) |
| Lighting charges | 54000 |
| Sundry expenses | 36000 |
| Total estimated cost p.a. | $\underline{95400}$ |
|  |  |
| Total full room days p.a. |  |
| Season | (Room days) |
| Off-season $\quad$ (3600 room days $\times 50 \%)$ | 7200 |
| Total full room days p.a. | $\underline{1800}$ |

## Answer to MTP_Final_Syllabus 2016_June2020_Set 1

Add: Profit
(20\% of rent or $25 \%$ of cost) 19.96
Room rent
Room rent to be charged during season = ₹99.78 per room day
During off-season $=₹ 99.78 \times 50 \%=₹ 49.89$ per room day
3. (a) A manufacturing unit of Ash Co. has presented the following details:

| Average units produced and sold per month | $\mathbf{2 4 0 0 0 0}$ |
| :--- | ---: |
| No. of workers | $\mathbf{8 0}$ |
| Sales value | ₹60 Lakhs |
| Contribution | ₹24 Lakhs |
| Wage rate | ₹5 per unit |

The production manager proposes to introduce a new automated machine due to which following changes will take place:

1. No. Of units produced and sold are expected to increase by $20 \%$.
2. No. Of workers will be reduced to 60 .
3. With a view to provide incentive for increased production, Production manager intends to offer $1 \%$ increase in wage rate for every $3 \%$ increase in average individual output achieved.
4. Decrease in selling price by $2 \%$.

Required:Calculate amount of extra contribution after introduction of new automated machine and give your recommendations.
(b) A manufacturing concerns has a multi-purpose Plant capable of operating at full capacity at 5000 machine hours per month. It may produce three products interchangeably, for which the output and cost details are as follows:

| Product | Output per Machine Hour | Material Costs |
| :---: | :---: | :---: |
| A | 500 units | $₹ 42.50$ per 1000 units |
| B | 250 units | $₹ 17.50$ per 1000 units |
| C | 1000 units | $₹ 30.00$ per 1000 units |

Labour Cost is ₹15 per machine hour while variable overheads will be ₹5 per machine hour. Fixed costs of this department are ₹ 100000 per monthly production period.

The company estimates from past experience that the full capacity can be used at all times if machine time can be freely moved from one product to another as dictated by demand and is anxious to establish suitable product selling prices (per 1000 units). The three price fixing methods under consideration are:

- To fix prices at product cost plus $\mathbf{2 0 \%}$
- To fix prices so as to give a contribution of ₹35 per machine hour
- To fix prices arbitrarily (per 1000 units) as Product $A-₹ 150$, Product B-₹230 and Product C -₹90.

Prepare a comparative statement of prices that would be charged under the three methods. Suggest which method should be adopted.

## Answer:

3. (a)

| Particulars | Before Automation |  | After Automation |  |
| :---: | :---: | :---: | :---: | :---: |
| 1. Total Output | 240000 units (Given) |  | $240000+20 \%=288000$ units |  |
| 2. No. Of Employees | 80 |  | 60 |  |
| 3.Output per <br> Employee (1/2)  | 3000 units |  | 4800 |  |
|  | Per Unit | Total | Per Unit | Total |
| 4.Selling Price / Sales | $\begin{array}{r} ₹ 6000000 / 240000 \\ =₹ 25 \end{array}$ | $\begin{array}{r} \text { ₹ } 6000000 \\ \text { (Given) } \end{array}$ | $\begin{array}{r} ₹ 25-2= \\ ₹ 24.5 \end{array}$ | $\begin{array}{r} 288000 \times 24.5 \\ =₹ 7056000 \end{array}$ |
| 5. Variable Costs: <br> (a) Labour <br> (b) Others (bal. Fig) | $\begin{array}{r} \text { ₹5 (Given) } \\ \text { ₹10 (bal. Fig) } \end{array}$ |  | $\begin{array}{r} ₹ 5+20 \% \\ =₹ 6 \\ \text { ₹ } 10 \text { (same) } \end{array}$ |  |
| 6. Contribution (4-5) | $\begin{array}{r} ₹ 2400000 / 240000 \\ =₹ 10 \end{array}$ | $\begin{array}{r} \text { ₹2400000 } \\ \text { (Given) } \end{array}$ | ₹8.5 | $\begin{array}{r} 288000 \times 8.5= \\ ₹ 2448000 \end{array}$ |

Note: Average individual output increase $=\frac{4800-3000}{3000}=60 \%$
Since Average individual output has increased by $60 \%$, Bonus entitlement will be 20\%.
Decision: Increase in Monthly Contribution = ₹2448000 -₹2400000 = ₹ 48000 . Hence the project is acceptable.
(b) Statement of Selling Prices under alternative strategies (per 1000 units) (₹)

| S. No. | Particulars | Product A | Product B | Product C |
| :---: | :--- | :---: | :---: | :---: |
| a | Output per machine hour | 500 units | 250 units | 1000 units |
| b | Labour time reqd per 1000 units $=$ <br> $(1000 / a)$ | 2 hours | 4 hours | 1 hour |
| c | Material cost (given) | 42.5 | 17.5 | 30 |
| d | Labour cost -₹15 per hour | 30 | 60 | 15 |
| e | Variable OH @ ₹5 per hour | 10 | 20 | 5 |
| f | Total variable cost (c+d+e) | 82.5 | 97.5 | 50 |
| g | Fixed OH (100000/5000 hrs) = ₹20 <br> per hour | 40 | 80 | 20 |
| h | Total cost (f+g) | 122.5 | 177.5 | 70 |
| i | Profit margin at 20\% of Total cost | 24.5 | 35.5 | 14 |
| j | Selling price based on Cost plus <br> basis (h+i) | 147 | 213 | 84 |

| $k$ | Contribution @ ₹35 per hour | 70 | 140 | 35 |
| :---: | :--- | :---: | :---: | :---: |
| I | Selling price to guarantee <br> contribution (f+k) | 152.5 | 237.5 | 85 |
| m | Selling price fixed arbitrarily (given) | 150 | 230 | 90 |
| n | Best selling price (highest) | 152.5 | 237.5 | 90 |
| o | Best method of fixing the price | Guaranteed <br> contribution | Guaranteed <br> contribution | Arbitrary <br> method |

Decision: On an overall basis, the method which guarantees contribution of ₹35 per machine hour may be considered as ideal as it will ensure a profit of (₹ 35 x 5000 hrs) less Fixed Cost $₹ 100000=₹ 75000$ per month. This profit will be earned irrespective of the product mix decision.

The effect of other methods of pricing depends upon the sale quantity, sales mix and the impact of key factor.
4. (a) StanleyCassette Ltd. Has budgeted the following sales for Feb 2020

| Cassette A | 1100 units @ ₹50 per unit |
| :--- | :--- |
| Cassette B | 950 units @ ₹100 per unit |
| Cassette C | 1250 units @ ₹80 per unit |

As against this, the actual sales were:

| Cassette A | 1300 units @ ₹55 per unit |
| :--- | :--- |
| Cassette B | 1000 units @ ₹95 per unit |
| Cassette C | 1200 units @ ₹78 per unit |

The cost per unit of Cassettes A, B and C was ₹ 45 , ₹ 85 and ₹ 70 respectively.
Compute the different variances to explain the difference between the budgeted and actual profit.
(b) A firm of printer is contemplating joining the Uniform costing system being operated by its trade association but the Managing Director is doubtful about the advantages of becoming involved in the scheme. Prepare a report to the Managing Director describing the advantages that the firm is likely to gain.

## Answer:

4. (a)Working Notes
(1) Calculation of Standard and Actual Profit Per Unit

| Cassette | Standard |  |  | Actual |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Selling Price | Cost | Profit | Selling Price | Cost | Profit |
| A | 50 | 45 | 5 | 55 | 45 | 10 |
| B | 100 | 85 | 15 | 95 | 85 | 10 |
| C | 80 | 70 | 10 | 78 | 70 | 8 |

(2) Calculation of Budgeted and Actual Total Profit

Answer to MTP_Final_Syllabus 2016_June2020_Set 1

| Cassette | Budgeted |  |  | Actual |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Sales qty. <br> (units) | Profit per <br> unit (₹) | Total Profit <br> $(₹)$ | Sales qty. <br> (units) | Profit per <br> unit (₹) | Total <br> Profit (₹) |
|  | 1100 | 5 | 5500 | 1300 | 10 | 13000 |
| B | 950 | 15 | 14250 | 1000 | 10 | 10000 |
| C | 1250 | 10 | 12500 | 1200 | 8 | 9600 |
|  |  |  | 32250 |  |  | 32600 |

Calculation of Variances
(1) Total profit variance due to sales

Actual profit - Budgeted profit

$$
=₹ 32600-₹ 32250 \quad=₹ 350(\mathrm{~F})
$$

(2) Profit variance due to selling price

Actual qły. (Actual selling price - Standard selling price)

$$
\begin{aligned}
& A=1300(55-50)=₹ 6500(F) \\
& \begin{aligned}
B=1000(95-100) & =₹ 5000(\mathrm{~A}) \\
C=1200(78-80) & =₹ 2400(\mathrm{~A}) \\
& =₹ 900(\mathrm{~A})
\end{aligned}
\end{aligned}
$$

(2) Profit variance due to sales volume

Std. Profit (Actual qty. - Budgeted qty.)

$$
\begin{aligned}
A=5(1300-1100) & =₹ 1000(F) \\
B=15(1000-950) & =₹ 750(F) \\
C=10(1200-1250) & =₹ 500(A) \\
& =₹ 1250(F)
\end{aligned}
$$

Profit variance due to sales is further analyzed into:
(a) Profit variance due to sales mix

Std. Profit (Actual qty. - Standard proportion for actual sales)

$$
\begin{array}{ll}
A=5(1300-1167) & =₹ 665(F) \\
B=15(1000-1008) & =₹ 120(A) \\
C=10(1200-1325) & \\
& =₹ 1250(A) \\
& =₹ 705(A)
\end{array}
$$

Std. proportion for actual sales is calculated as below:
(Units)
$A=\frac{3500}{3300} \times 1100$
1167
$B=\frac{3500}{3300} \times 950$
$C=\frac{3500}{3300} \times 1250$
1008 1325
(b) Profit variance due to sales quantity

Std. Profit (Standard proportion for actual sales - Budgeted qty.)

$$
\begin{array}{ll}
\qquad \begin{array}{ll}
A=5(1167-1100) & =₹ 335(F) \\
B=15(1008-950) & \\
C=₹ 870(F) \\
& =₹ 750(F) \\
10(1325-1250) & =₹ 1955(F) \\
\text { Verification } \\
\text { Volume Variance = Mix variance + Qty. variance } \\
₹ 1250(F)=₹ 705(A)+1955(F)
\end{array}
\end{array}
$$

Statement of Profit showing Analysis of Variances
(₹)

| Particulars | Cassette |  |  |
| :--- | ---: | ---: | ---: |
|  | A | B | C |
| Budgeted sales | 55000 | 95000 | 100000 |
| Less: Budgeted cost | 49500 | 80750 | 87500 |
| Budgeted profit | 5500 | 14250 | 12500 |
| Variances |  |  |  |
| Profit variance due to selling price | $6500(F)$ | $5000(A)$ | $2400(A)$ |
| Profit variance due to sales mix | $665(F)$ | $120(A)$ | $1250(A)$ |
| Profit variance due to sales qty. | $335(F)$ | $870(F)$ | $750(F)$ |
|  | $7500(F)$ | $4250(A)$ | $2900(A)$ |
| Actual profit | 13000 | 10000 | 9600 |

(b) For introduction of uniform costing in an industry, first of all, the top managements of the different concerns in the industry should understand the benefits that can be reaped by the individual firmsand the total industry on implementation of the uniform costing. The benefits which may accrue to the participating concerns from the use of uniform costing are as follows:

1. It provides a standard system for the maintenance of cost accounts useful to all members of the industry, especially small and new members. This helps to compare the efficiency of individual units.
2. The members can pool their resources and get the benefit of better R\&D efforts at cheaper rate.
3. It helps the firms to submit reliable cost data to price fixing bodies to determine the average cost and fixing the fair selling price of various products. It facilitates realistic pricing policies.
4. Greater ease in operating can be achieved by thorough understanding of costs and competitive spirit inculcated in the industry.
5. It facilitates improvement in labour, machinery and production methods and techniques.
6. It facilitates cost comparison among different concerns producing same products and enables each concern to measure its own efficiency with its competitors.
7. (a) There are two Profit Centres namely Division A and Division B in Ditya Ltd. Division A produces four products $P, Q, R$ and $S$. Each product is sold in the external market also. The relevant data for Division $A$ are as follows:

## Answer to MTP_Final_Syllabus 2016_June2020_Set 1

|  | P | Q | R | S |
| :--- | ---: | ---: | ---: | ---: |
| Market price per unit (₹) | 700 | 690 | 560 | 460 |
| Variable cost of production per unit (₹) | 660 | 620 | 360 | 370 |
| Labour hours required per unit (Hours) | 6 | 8 | 4 | 6 |

The maximum sales in the external market are: $P$ - 3000 units, $Q-3500$ units, $R$ 2800 units and S-1800 units.

Product $S$ can be transferred to Division $B$ also but the maximum quantity that might be required for transfer is $\mathbf{2 2 0 0}$ units of S .
Division $B$ can also purchase the same product at a price of ₹ 420 per unit from the market instead of receiving transfers of Product $S$ from Division A.

Required:
a) Calculate the Transfer Price for each unit for 2200 units of product $S$, if the Total Labour Hours available in Division A are - (i) 48000 hours, (ii) 64000 hours.
b) Whether is it profitable for Division B to get transfer 2200 units of Product $S$ from Division A in above (a) situation?

Show calculation of units to nearest unit and rest upto two decimal points.
(b) A Company produces three products $P, Q$ and $R$ for which the Standard Cost per unit and quantities produced are as under:

| Products | P | Q | R |
| :--- | :---: | :---: | :---: |
| Units produced and sold | 36000 | 48000 | 96000 |
| Direct Material Cost per unit ₹ | 60 | 48 | 45 |
| Direct Labour Cost per unit ₹ | 30 | 24 | 18 |
| Machine Hours per unit (hours) | 0.5 | 0.4 | 0.3 |

Total Production Overheads are absorbed on Machine Hour basis. The rate is ₹60 per Machine Hour.

The Company has analyzed its operations and determined that five activities act as Cost Drivers for Overheads. Data relating to five activities are given below:

| Activity Area | Cost Driver | Cost of each activity as \% of Total <br> Production Overhead Cost |
| :--- | :---: | :---: |
| Store Receiving | Number of Requisitions | $25 \%$ |
| Machine Set-up | Number of Set-ups | $20 \%$ |
| Machine Running | Machine Hours worked | $25 \%$ |
| Packing | Packing time in Hours | $16 \%$ |
| Storage | Area in Square Meters | $14 \%$ |

The investigation into the Production Overhead Activities for the period revealed the following:

| Activity | P | Q | R |
| :--- | :---: | :---: | :---: |
| Number of Requisitions | 1200 | 1500 | 3900 |
| Number of Machine Set-ups | 60 | 120 | 320 |
| Packing Hours | 3000 | 4800 | 10200 |

| Storage (sq. meters) | 10800 | 12000 | 19200 |
| :--- | :--- | :--- | :--- |

## Required:

1) Calculate the Total Production Overheads.
2) Prepare Product Cost Statement showing per unit cost under Traditional Absorption Costing Method.
3) Calculate the Cost Driver Rates.
4) Prepare Product Cost Statement showing per unit cost under ABC Method.
5) What is the difference in Costs due to adoption of Traditional Absorption Costing Method and ABC Method?

## Answer:

5. (a)
6. Key factor allocation for external sales

| S.No | Particulars | P | Q | R | S | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| a | Maximum external sales | 3000 units | 3500 units | 2800 units | 1800 units |  |
| b | Hours reqd per unit | 6 hrs | 8 hrs | 4 hrs | 6 hrs |  |
| c | Total DLH reqd for external sales (axb) | 18000 hrs | 28000 hrs | 11200 hrs | 10800 hrs | $\begin{array}{r} 68000 \\ \text { hrs } \end{array}$ |
| d | Selling price per unit | ₹700 | ₹690 | ₹560 | ₹460 |  |
| e | Variable costs per unit | ₹660 | ₹620 | ₹360 | ₹370 |  |
| f | Contribution per unit (d-e) | ₹40 | ₹70 | ₹200 | ₹90 |  |
| g | Contribution per hour (f/b) | ₹6.67 | ₹8.75 | ₹50 | $₹ 15$ |  |
| h | Ranking for production | IV | III | 1 | 11 |  |
| i | Allocation of 48000 hrs for external sale | Nil | 26000 hrs | 11200 hrs | 10800 hrs | $\begin{array}{r} 48000 \\ \text { hrs } \end{array}$ |
| j | Allocation of 64000 hrs for external sale | 14000 hrs | 28000 hrs | 11200 hrs | 10800 hrs | $\begin{array}{r} 64000 \\ \text { hrs } \end{array}$ |

Note: Total hours reqd for meeting external sale is 68000 hours. However, the total labour hours available is only 64000 hours. Hence, only 64000 hours are allocated in step (i) for meeting the external sales.
2. Computation of Transfer Prices

| Hours Available | 48000 hours | 64000 hours |
| :--- | :--- | :--- |
| Internal transfer <br> qty. \& Hrs | 2200 units of $\mathrm{x} \times 6=13200$ hours | 2200 units of $\mathrm{S} \times 6=13200$ <br> hours |
| Total Opportunity <br> Costs | 13200 hrs from Q at ₹8.75 ph $=$ <br> $₹ 115500$ | 13200 hrs from P at ₹6.67 <br> ph $=₹ 88044$ |
| Opportunity <br> Costs | $\frac{115500}{2200}=₹ 52.50$ per unit | $\frac{88044}{2200}=₹ 40.02$ per unit |
| Variable Costs | $₹ 370$ per unit | $₹ 370$ per unit |
| Minimum Transfer <br> Price | $₹ 422.50$ per unit | $₹ 410.02$ per unit |
| Outside Market <br> Price | $₹ 420$ per unit | $₹ 420$ per unit |

## Answer to MTP_Final_Syllabus 2016_June2020_Set 1

| Profitability of |  |
| :--- | :--- |
| Internal |  |
| Transfer/Decision |  |

Not profitable, since outside market price is less. It is preferable to buy $S$ from outside at ₹ 420 pu .

Profitable, since transfer price is less. It is preferable to transfer 2200 units of $S$.
(b)

> 1. Total Machine Hours and POH

| P | Q | R | Total |
| :---: | :---: | :---: | :---: |
| $36000 \times 0.5=18000 \mathrm{hrs}$ | $48000 \times 0.4=19200 \mathrm{hrs}$ | $96000 \times 0.30=28800 \mathrm{hrs}$ | 66000 hours |

So, Total POH $=66000$ hours $\times ₹ 60=₹ 3960000$
2. Computation of ABC Rates

| Activity | $\%$ | Cost Pool (₹) | Cost Driver | Cost Driver Qty | ABC Rate |
| :--- | :---: | ---: | :---: | :---: | :--- |
| Store <br> Receiving | $25 \%$ | 990000 | Number <br> of Requisitions | $1200+1500+3900=$ <br> 6600 | $₹ 150$ per <br> reqn |
| Machine <br> Set-up | $20 \%$ | 792000 | Number of <br> Set-ups | $60+120+320=500$ | ₹ 1584 per <br> set-up |
| Machine <br> Running | $25 \%$ | 990000 | Machine <br> Hours worked | $18000+19200+288$ <br> $00=66000$ | ₹ 15 per <br> M/c Hour |
| Packing | $16 \%$ | 633600 | Packing time <br> in Hours | $3000+4800+10200$ <br> $=18000$ | ₹35.2 per <br> Pkg Hour |
| Storage | $14 \%$ | 554400 | Area in Square <br> Metres | $10800+12000+192$ <br> $00=42000$ | ₹13.2 per <br> Sq. M |
| Total |  | 3960000 |  |  |  |

3. Overhead Cost Allocation using ABC Rates (₹)

| Activity Area | P | Q | R | Total |
| :--- | :---: | :---: | :---: | :---: |
| Store Receiving | $1200 \times 150=180000$ | $1500 \times 150=225000$ | $3900 \times 150=585000$ | 990000 |
| Machine Set-up | $60 \times 1584=95040$ | $120 \times 1584=190080$ | $320 \times 1584=506880$ | 792000 |
| Machine <br> Running | $18000 \times 15=270000$ | $19200 \times 15=288000$ | $28800 \times 15=432000$ | 990000 |
| Packing | $3000 \times 35.2=105600$ | $4800 \times 35.2=168960$ | $10200 \times 35.2=359040$ | 633600 |
| Storage | $10800 \times 13.2=142560$ | $12000 \times 13.2=158400$ | $19200 \times 13.2=253440$ | 554400 |
| Total OH in ABC | 793200 | 1030440 | 2136360 | 3960000 |
| Production Qty. | 36000 units | 48000 units | 96000 units |  |
| OH Cost pu. | 22.03 | 21.47 | 22.25 |  |

4. Statement of Costs Per unit (₹)

| S.No. | Particulars | $P$ | $Q$ | $R$ |
| :---: | :--- | :---: | :---: | :---: |
| a | Direct Materials per unit | 60 | 48 | 45 |
| $b$ | Direct labour per unit | 30 | 24 | 18 |
| c | Prime Cost per Unit (a+b) | 90 | 72 | 63 |
| d | OH Cost p.u. under Traditional System <br> (Hrspu $\times$ ₹60) | $0.5 \times 60=30$ | $0.5 \times 60=24$ | $0.3 \times 60=18$ |

## Answer to MTP_Final_Syllabus 2016_June2020_Set 1

| e | Total Cost p.u. under Traditional <br> System (c+d) | 120 | 96 | 81 |
| :---: | :--- | :---: | :---: | :---: |
| f | OH Cost p.u. under ABC System (as <br> per WN3) | 22.03 | 21.47 | 22.25 |
| g | Total Cost p.u. under ABC System <br> (c+f) | 112.03 | 93.47 | 85.25 |
| h | Difference between Traditional and <br> ABC System (e-g) | 7.97 | 2.53 | 4.25 |
| i | Effect under Traditional System | Over costed | Over costed | Under costed |

6. (a) A Company has just completed the manufacture of 40 units of a new product. The manufacturing costs are-

| Direct Material | 200000 |
| :--- | :--- |
| Direct Labour: 8000 hours @₹20 per hour | 160000 |
| Variable Overheads | 80000 |
| Special Tools (re-usable) | 10000 |
| Fixed Overhead apportioned | 100000 |
| Total | 550000 |

The Company's policy is to add a profit of $12 \%$ on Selling Price.

The Company received another order for 120 units of this product for which the Company quoted, based on its policy on absorption cost basis, a price of $₹ 15625$ per unit. The Customer struck the order to ₹1 1000 per unit. The Company is short of work and so is keen to take up more orders but it is reluctant to accept this order price because it is against the policy to accept any price before its cost. The Company experiences a Learning Curve of $90 \%$.

Compute the Gain or Loss arising from acceptance of the order of $₹ 11000$ p.U. and advise the Company suitably.
(b)Aditya Enterprises is having three plants manufacturing dry-cells, located at different locations. Production cost differs from plant to plant. There are five sales offices of the company located in different regions of the country. The sales prices can differ from region to region. The shipping cost from each plant to each sales office and other data are given below:

Product Data

| Production Cost per unit (₹) | Max. capacity in no. of units | Plant no. |
| :--- | :--- | :--- |
| 20 | 150 | 1 |
| 22 | 200 | 2 |
| 18 | 125 | 3 |

Shipping Costs (₹)

|  | Sales Offices |
| :--- | :--- |

|  | A | B | C | D | E |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Plant 1 | 1 | 1 | 5 | 9 | 4 |
| Plant 2 | 9 | 7 | 8 | 3 | 6 |
| Plant 3 | 4 | 5 | 3 | 2 | 7 |

Demand and Sales Prices

| Demand (units) | 80 | 100 | 75 | 45 | 125 |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Sales Price (₹) | 30 | 32 | 31 | 34 | 29 |

Find the production and distribution schedule most profitable to the company. [8]

## Answer:

6. (a)
7. Computation of Selling Price of First Order for 40 units

| $a$ | Total Costs | $₹ 550000$ |
| :--- | :--- | :--- |
| $b$ | Number of units | 40 units |
| c | Average Cost per unit = (a/b) | $₹ 13750$ |
| $d$ | Since Profit is 12\% on Price, it is 12/88 on Cost of ₹13750 | $₹ 1875$ |
| e | Price Quoted (Cost + Profit) (c+d) | $₹ 15625$ |

2. Computation of Time required for 120 units

| No. of units | Time reqd per unit | Total time reqd | Cumulative time |
| :---: | :--- | :--- | :--- |
| 40 | $8000 \mathrm{hrs} / 40$ units $=200 \mathrm{hrs}$ | 8000 hrs (given) | 8000 hrs |
| 80 | $200 \times 90 \%=180 \mathrm{hrs}$ | 80 units $\times 180 \mathrm{hrspu}$ | 14400 hrs |
| 160 | $180 \times 90 \%=162 \mathrm{hrs}$ | 160 units $\times 162 \mathrm{hrspu}$ | 25920 hrs |

Time required for 120 units $=$ Cum. Time for 160 units - Time required for first 40 units $=25920-8000=17920$ hours.
3. Cost Sheet for order of 120 units

| Particulars | Computation | $₹$ |
| :--- | :--- | :--- |
| Direct Material | $₹ 200000 / 40$ = ₹5000 x 120 units | 600000 |
| Direct Labour | 17920 hours x ₹20 per hour | 358400 |
| Variable Overheads | 17920 hours x ₹10 per hour | 179200 |
| Special Tools (re-usable) | Hence, Relevant Cost is Nil | Nil |
| Fixed Overhead | Idle Capacity, hence Not Relevant | Nil |
| Total Cost |  | 1137600 |
| Cost per unit | $₹ 1137600 / 120$ | 9480 |
| Price offered |  | 11000 |
| Profit per unit |  | 1520 |

Decision: Total profit from 120 units is (₹ $1520 \times 120$ units) $=₹ 182400$. Hence, the order should be accepted.
(b) In order to solve the transportation problem, we use the given information to derive the profit matrix. This is being done as follows:
Profit $=$ Sales price - Production cost - Shipping cost

Thus, if we transport one unit of dry cell from each of the three plants to each of the five sales office, the following matrix is obtained:

Table 1

| Plant | A | B | C | D | E | Capacity (units) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 9 | 11 | 6 | 5 | 5 | 150 |
| 2 | -1 | 3 | 1 | 9 | 1 | 200 |
| 3 | 8 | 9 | 10 | 14 | 4 | 125 |
| Demands | 80 | 100 | 75 | 45 | 125 | 475 |

Here, if we transport one unit from plant 2 to sales office, the profit obtained will be calculated as follows (for above table):
Profit = ₹34-₹22-₹3 = ₹9

The objective of the company is to maximize profit. For achieving this objective, let us convert this maximization problem into minimization problem by subtracting all the elements of the above pay-off matrix from the highest pay-off, i.e., 14. Thus we have:

Table 2

| Plant | Loss Matrix |  |  |  |  | Capacity (units) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | A | B | C | D | E |  |
| 1 | 5 | 3 | 8 | 9 | 9 | 150 |
| 2 | 15 | 11 | 3 | 5 | 13 | 200 |
| 3 | 6 | 5 | 4 | 0 | 10 | 125 |
| Demands | 80 | 100 | 75 | 45 | 125 |  |

The problem is an unbalanced problem, i.e., capacity is 475 and demand is 425 . Hence, a dummy sales office is added with cost equal to zero for all plants and demand equal to 50 units. Now let us apply Vogel's Approximation Method to the resultant balanced matrix for finding the initial feasible solution.

Table 3

| Plant | Sales office |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | A | B | C | D | E | Dummy | $\begin{array}{\|l\|} \hline \text { Capacity } \\ \hline 150 \end{array}$ | Difference |  |  |
|  | 50 | 100 |  |  |  |  |  | 3 | 3 | 2 |
| 1 | 5 | 3 | 8 | 9 | 9 | 0 |  |  |  |  |
|  | 25 | 1 |  |  | 125 | 50 | 200 | 5 | 11 | 2 |
| 2 | 15 | 11 | 13 | 5 | 13 | 0 |  |  |  |  |
|  | 5 |  | 75 | 45 |  |  | 125 | 0 | 4 | 1 |
| 3 | 6 | 5 | 4 | 0 | 10 | 0 |  |  |  |  |
| Demand | 80 | 100 | 75 | 45 | 125 | 50 | $\begin{aligned} & 475 \\ & 475 \\ & \hline \end{aligned}$ |  |  |  |

| Difference | 1 | 2 | 4 | 5 | 1 | 0 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  | 1 | 2 | 4 | - | 1 | - |
|  | 1 | 2 | 4 | - | 1 | - |

The initial solution obtained by VAM is given below, which is tested for optimality.

Table 4

| Plant | Sales office |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | A | B | C | D | E | Dummy | Capacity (Units) |
|  | 50 | 100 |  |  |  |  | 150 |
| 1 | 5 | 3 | 8 | 9 | 9 | 0 |  |
|  | 25 | 11 | 13 | 5 | 125 | 50 | 200 |
| 2 | 15 |  |  |  | 13 | 0 |  |
|  | 5 | 5 | 75 | 45 | 10 | 0 | 125 |
| 3 | 6 |  | 4 | 0 |  |  |  |
| Demand | 80 | 100 | 75 | 45 | 125 |  |  |

Since, there are 8 allocations, the solution is non-degenerate. Let us now introduce $U_{i}-V_{j,} i=(1,2,3) ; j=(1,2, \ldots, 6)$ such that $\Delta_{i j}=C_{i j}-\left(U_{i}+V_{j}\right)$ for allocated cells. We assume $U_{2}=0$ and remaining $U_{i}$ 's, $V_{j}$ 's and $\Delta_{i j}$ 's are calculated as below:

Table 5

(Note: For values of occupied and unoccupied cells refer to Note 1.)

Table 6

| Plant | Sales office |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | A | B | C | D | E | Dummy | Capacit <br> y | V 's |
| 1 | $\begin{aligned} & 50 \\ & \hline 5 \end{aligned}$ | $\frac{109}{3}$ | $8$ | ${ }^{9}$ | $\begin{aligned} & 9 \\ & 2 \end{aligned}$ | $\begin{gathered} 0 \\ 6 \end{gathered}$ | 150 | -6 |
| 2 | $15$ | $11$ | $13$ | $\begin{array}{\|l\|} \hline 25 \\ \hline 5 \\ \hline \end{array}$ | $\begin{aligned} & \hline 125 \\ & \hline 13 \end{aligned}$ | $\begin{array}{l\|} \hline 50 \\ \hline 0 \end{array}$ | 200 | 0 |
| 3 | $\frac{30}{6}$ | $\begin{array}{r} 5 \\ 1 \\ \hline \end{array}$ | $\frac{75}{4}$ | $\begin{array}{\|l\|} \hline 20 \\ \hline 0 \\ \hline \end{array}$ | $10$ | $\begin{aligned} & 0 \\ & 5 \end{aligned}$ | 125 | -5 |
| Demand | 80 | 100 | 75 | 45 | 125 | 50 | $>_{475}^{475}$ |  |
| $\mathrm{V}_{j}$ 's | 11 | 9 | 9 | 5 | 13 | 0 |  |  |

* Refer to Note 2 for values of occupied and unoccupied cells.

Since the values opportunity cost in all the unoccupied cells are positive, the solution obtained above is optimal. The allocation of plants to sales office and their profit amount is given below:

| Plant | Sales office | Units | Profit per unit (₹) | Profit (₹) |
| :---: | :---: | :---: | :---: | :---: |
| 1 | A | 50 | 9 | 450 |
| 1 | B | 100 | 11 | 1,100 |
| 2 | D | 25 | 9 | 225 |
| 2 | E | 125 | 1 | 125 |
| 2 | Dummy | 50 | 0 | 0 |
| 3 | A | 30 | 8 | 240 |
| 3 | C | 75 | 10 | 750 |
| 3 | D | 20 | 14 | 280 |
|  |  |  | Total profit | 3,170 |

## Working Notes

1. Values in Table 5 have been calculated as follows:

| Occupied cells $C_{i j}=U_{i}+V_{j}$ | Unoccupied cells $\Delta_{\mathrm{i}}=\mathrm{C}_{\mathrm{ij}}-\left(\mathrm{U}_{\mathrm{i}}+\mathrm{V}_{\mathrm{j}}\right)$ |
| :--- | :--- |
| $\mathrm{C}_{11}=\mathrm{U}_{1}+\mathrm{V}_{1}=5$ or $\mathrm{U}_{1}=5-15=-10$ | $\mathrm{C}_{13}=8-(-10+13)=5$ |
| $\mathrm{C}_{12}=\mathrm{U}_{1}+\mathrm{V}_{2}=3$ or $\mathrm{V}_{2}=3+10=13$ | $\mathrm{C}_{14}=9-(-10+9)=10$ |
| $\mathrm{C}_{21}=\mathrm{U}_{2}+\mathrm{V}_{1}=15$ or $\mathrm{V}_{1}=15-0=15$ | $\mathrm{C}_{15}=9-(-10+13)=6$ |
| $\mathrm{C}_{25}=\mathrm{U}_{2}+\mathrm{V}_{5}=13$ or $\mathrm{V}_{5}=13-0=13$ | $\mathrm{C}_{16}=0-(-10+0)=10$ |
| $\mathrm{C}_{26}=\mathrm{U}_{2}+\mathrm{V}_{6}=0$ or $\mathrm{V}_{6}=0$ | $\mathrm{C}_{22}=11-(0+13)=-2$ |
| $\mathrm{C}_{31}=\mathrm{U}_{3}+\mathrm{V}_{1}=6$ or $\mathrm{U}_{3}=6-15=-9$ | $\mathrm{C}_{23}=13-(0+13)=0$ |
| $\mathrm{C}_{33}=\mathrm{U}_{3}+\mathrm{V}_{3}=4$ or $\mathrm{V}_{3}=4+9=13$ | $\mathrm{C}_{24}=5-(0+9)=-4$ |
| $\mathrm{C}_{34}=\mathrm{U}_{3}+\mathrm{V}_{4}=0$ or $\mathrm{V}_{4}=9$ | $\mathrm{C}_{32}=5-(-9+13)=1$ |
|  | $C_{35}=10-(-9+13)=6$ |

|  | $\mathrm{C}_{36}=0-(-9)=9$ |
| :--- | :--- |

2. Values in Table 6 have been calculated as follows:

| Occupied cells $C_{i j}=U_{i}+V_{j}$ | Unoccupied cells $\Delta_{\mathrm{i}}=\mathrm{C}_{\mathrm{ij}}-\left(\mathrm{U}_{\mathrm{i}}+\mathrm{V}_{\mathrm{j}}\right)$ |
| :--- | :--- |
| $\mathrm{C}_{11}=\mathrm{U}_{1}+\mathrm{V}_{1}=5$ or $\mathrm{U}_{1}=5-11=-6$ | $\mathrm{C}_{13}=8-(-6+9)=5$ |
| $\mathrm{C}_{12}=\mathrm{U}_{1}+\mathrm{V}_{2}=3$ or $\mathrm{V}_{2}=3+6=9$ | $\mathrm{C}_{14}=9-(-6+5)=10$ |
| $\mathrm{C}_{24}=\mathrm{U}_{2}+\mathrm{V}_{4}=5$ or $\mathrm{V}_{4}=5$ | $\mathrm{C}_{15}=9-(-6+13)=2$ |
| $\mathrm{C}_{25}=\mathrm{U}_{2}+\mathrm{V}_{5}=13$ or $\mathrm{V}_{5}=13$ | $\mathrm{C}_{16}=0-(-6+0)=6$ |
| $\mathrm{C}_{26}=\mathrm{U}_{2}+\mathrm{V}_{6}=0$ or $\mathrm{V}_{6}=0$ | $\mathrm{C}_{21}=15-(0+11)=4$ |
| $\mathrm{C}_{31}=\mathrm{U}_{3}+\mathrm{V}_{1}=6$ or $\mathrm{V}_{1}=6+5=11$ | $\mathrm{C}_{22}=11-(0+9)=2$ |
| $\mathrm{C}_{33}=\mathrm{U}_{3}+\mathrm{V}_{3}=4$ or $\mathrm{V}_{3}=9$ | $\mathrm{C}_{23}=13-(0+9)=4$ |
| $\mathrm{C}_{34}=\mathrm{U}_{3}+\mathrm{V}_{4}=0$ or $U_{4}=-5$ | $\mathrm{C}_{32}=5-(-5+9)=1$ |
|  | $C_{35}=10-(-5+13)=2$ |
|  | $C_{36}=0-(-5+0)=5$ |

7. (a) You are provided with the following information:

| Activity | Precedence | Time Estimates |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Optimistic | Most likely | Pessimistic |
| A: 1-2 | None | 1 | 2 | 3 |
| B: $2-3$ | A | 1 | 4 | 7 |
| C: $2-4$ | A | 1 | 2 | 9 |
| D: $3-5$ | B | 1 | 2 | 9 |
| E: $4-5$ | C | 2 | 3 | 4 |
| F: $5-6$ | D, E | 2 | 3 | 4 |

## Required:

(i) Draw a project network. Identify the critical path and expected length of the project.
(ii) Find out variance for different activities.
(iii) Find out standard deviation of the network.
(iv) What is the probability of completing the project in 12 days?
(v) What is the probability of completing the project in 14 days?
(vi) What is the probability of completing the project in 10 days?
(b) Akash Ltd. manufactures 2 products $X$ and $Y$ and sells them at ₹90 and ₹80 respectively. Each product passes through two Departments $P$ and $Q$ before it becomes a finished product. The capacities of Departments $P$ and $Q$ are limited to 3400 hours and 3640 hours respectively. Each product requires 2 kg of Direct Materials " k ", of which the maximum availability is 17000 kgs at ₹ 5 per kg . Product $X$ and $Y$ have a maximum market demand of 7400 units and 10000 units respectively. The time requirements of the products in the Production Department are as under-

| Department | Machine Hour Rate | Product $X$ | Product $\mathbf{Y}$ |
| :---: | :---: | :---: | :---: |
| P | ₹40 per hour | 0.50 hours | 0.30 hours |
| Q | ₹60 per hour | 0.40 hours | 0.45 hours |

From the above data - (a) Identify the Limiting Factors, (b) Compute the Contribution per unit of $P$ and $Q$, (c) Compute Contribution per unit of each Limiting Factor identified as above, (d) Determine what is the best possible combination of $P$ and $Q$ in order to maximize profit, if Fixed Costs for the period is ₹ $\mathbf{1 2 4 7 5 0}$.

## Answer:

7. (a) (i)

| Activity | Duration $\left[\dagger_{\circ} \times 1+t_{m} \times 4+t_{p} \times 1\right] / 6$ |
| :---: | :---: |
| $1-2$ | $12 / 6=2$ |
| $2-3$ | $24 / 6=4$ |
| $2-4$ | $18 / 6=3$ |
| $3-5$ | $18 / 6=3$ |
| $4-5$ | $18 / 6=3$ |
| $5-6$ | $18 / 6=3$ |

Critical path $=1-2-3-5-6$
Critical path duration $=12$
(ii) Variance of activities are as follows:

| Activity | $t_{p}$ | $t_{0}$ | S.D. $=\left(t_{p}-t_{o}\right) / 6$ | Var $=(\text { SD })^{2}$ |
| :---: | :---: | :---: | :---: | :---: |
| $1-2$ | 3 | 1 | $1 / 3$ | $1 / 9$ |
| $2-3$ | 7 | 1 | 1 | 1 |
| $2-4$ | 9 | 1 | $4 / 3$ | $16 / 9$ |
| $3-5$ | 9 | 1 | $4 / 3$ | $16 / 9$ |
| $4-5$ | 4 | 2 | $1 / 3$ | $1 / 9$ |
| $5-6$ | 4 | 2 | $1 / 3$ | $1 / 9$ |

(iii) SD of network:

Variance of Critical path $=$ Project variance

$$
\begin{aligned}
& =1 / 9+1+16 / 9+1 / 9 \\
& =(1+9+16+1) / 9 \\
& =3
\end{aligned}
$$

$$
S D=v 3=1.732
$$

(iv) $Z=\left(x-T_{C P}\right) / \sigma_{C P}=(12-12) / 1.732=0$

$$
\text { Or, } \begin{aligned}
P(x \leq 12) & =A(Z \leq 0) \\
& =0.5
\end{aligned}
$$

$$
=50 \%
$$

(v) $Z=\left(x-T_{C P}\right) / \sigma_{C P}=(14-12) / 1.732=1.15$

Or, $P(x \leq 14)=A(Z \leq 1.15)$
$=0.5+0.3749$

$$
=0.8749
$$

= 87.49\%
(vi) $Z=\left(x-T_{C P}\right) / \sigma_{C P}=(10-12) / 1.732=-1.15$

$$
\text { Or, } \begin{aligned}
P(x \leq 10) & =A(Z \leq-1.15) \\
& =0.5-0.3749 \\
& =0.1251 \\
& =12.51 \%
\end{aligned}
$$

(b)

1. Identification of Key Factor(s)

| Resource | Raw Material (kg) | Dept. P Hours | Dept. Q Hours |
| :--- | :--- | :--- | :--- |
| Requirement for <br> 7400 units of $X$ | $7400 \times 2=14800$ | $7400 \times 0.5=3700$ | $7400 \times 0.4=2960$ |
| Requirement for <br> 10000 units of $Y$ | $10000 \times 2=20000$ | $10000 \times 0.3=3000$ | $10000 \times 0.45$ <br> 4500 |
| Total <br> Requirement | 34800 | 6700 | 7460 |
| Less: Availability | 17000 | 17800 | 3300 |
| Shortage | 360 | 3820 |  |

Observation: Hence, all the 3 resources are Limiting Factors in this case.
2. Contribution and Ranking

| Particulars | Product X | Product Y |
| :--- | :--- | :--- |
| Sale Price per unit | 90 | 80 |
| Variable Costs per unit |  |  |
| Materials | $2 \mathrm{~kg} \times$ ₹5 $=10$ | $2 \mathrm{~kg} \times$ ₹5 $=10$ |
| Machine OH in Dept. P | $0.50 \mathrm{hrs} \times ₹ 40=20$ | $0.30 \mathrm{hrs} \times ₹ 40=12$ |
| Machine OH in Dept. Q | $0.40 \mathrm{hrs} \times ₹ 60=24$ | $0.45 \mathrm{hrs} \times ₹ 60=27$ |
| Sub-Total Variable Cost | 54 | 49 |
| Contribution per unit | 36 | 31 |
| Contribution per kg of Raw Material | $\frac{36}{2 \mathrm{~kg}}=18$ | $\frac{31}{2 \mathrm{~kg}}=15.50$ |

## Answer to MTP_Final_Syllabus 2016_June2020_Set 1

| Contribution per hour in Dept. P | $\frac{36}{0.50 \text { hours }}=72$ | $\frac{31}{0.30 \text { hours }}=103.33$ |
| :--- | :--- | :--- |
| Contribution per hour in Dept. Q | $\frac{36}{0.40 \text { hours }}=90$ | $\frac{31}{0.45 \text { hours }}=68.89$ |

Product $X$ has higher Ranking in terms of Raw materials and Dept. Q Resource, but Product Y has higher Ranking in Dept. P. In such case, i.e. multiple Key Factors with difference in Ranking Priority, Linear Programming Techniques are applied to arrive at the solution. This is a case of 2 Products $-X$ and $Y$ with 5 constraints.
3. Formulation of LPP

| Objective Function: Maximise Profit $Z=$ | $36 \mathrm{X}+31 \mathrm{Y}-124750$ |  |
| :--- | :--- | :--- |
| Constraints: $\quad$ Subject to: | $2 \mathrm{X}+2 \mathrm{Y} \leq 17000$ |  |
|  |  | $0.50 \mathrm{X}+0.30 \mathrm{Y} \leq 3400$ |
|  | $0.40 \mathrm{X}+0.45 \mathrm{Y} \leq 3640$ |  |
|  | $\mathrm{X} \leq 7400$ |  |
|  | $\mathrm{Y} \leq 10000$ |  |
|  | $\mathrm{X}, \mathrm{Y} \geq 0$ |  |

8. Write short notes on any four of the following:
$4 \times 4=16$
(a) Socio Economic Costing
(b) Difference between Cost Control and Cost Reduction
(c) Six Sigma
(d) Applications of Learning curve
(e) Limitations of Simulation

## Answer:

8. (a) Socio economics is the social science that studies how economic activity affects and is shaped by social processes. In general it analyzes how societies progress, stagnate, or regress because of their local or regional economy, or the global economy. Socio economists focus on the social impact of some sort of economic change. Such changes might include a closing factory, market manipulation, the signing of international trade treaties, new natural gas regulation, etc. Such social effects can be wide ranging in size, anywhere from local effects on a small community to changes to an entire society.
(b)

| Cost Control | Cost Reduction |
| :--- | :--- |
| Cost control represents efforts made <br> towards achieving target or goal. | Cost reduction represents the <br> achievement in reduction of cost. |
| Cost control assumes the existence <br> of standards or norms which are not <br> challenged. | Cost reduction assumes the existence of <br> concealed potential savings in standards <br> or norms which are therefore subjected <br> to a constant challenge with a view to <br> improvement by bringing out savings. |
| Cost control is a preventive | Cost reduction is a corrective function. |

| function. Costs are optimized before <br> they are incurred. |  |
| :--- | :--- |
| Cost control lacks dynamic <br> approach. | Cost reduction is a continuous process of <br> analysis. |

(c) Six Sigma is a set of practices originally developed by Motorola to systematically improve processes by eliminating defects. A defect is defined as non-conformity of a product or service to its specifications. Six sigma refers to the ability of highly capable processes to produce output within specification. In particular, processes that operate with six sigma quality produce at defect levels below 3.4 defects per one million opportunities. Six sigma's implicit goal is to improve all processes to that level of quality or better.
(d)Applications of Learning Curve are as follows:

- Learning curve helps to analyze CVP relationship during familiarization phase of product or process and thus is useful for cost estimates. It also assists in forecasting.
- Learning curve provides the base to set standards for the learning phase.
- It helps the Government to negotiate contracts. The Government receives full advantage of the decreasing unit cost in establishing the contract price.
- Cost data adjusted for learning effect helps in proper pricing decisions.
(e) Limitations of Simulations are:
- Simulations results are not precise. Unlike mathematical models, it does not give optimum solutions. At times one may not be able to assess the extent of error in a simulated result.
- Simulation may be expensive needing advanced computer supports.
- It is often long, complicated process to develop a model.
- Simulation by itself does not generate solutions, but only indicates a way of evaluating solutions.
