

Answer to PTP_Final_Syllabus 2012_Dec2014_Set 2

Paper 15 - Business Strategy and Strategic Cost Management

Full Marks: 100

Time allowed: 3 hours

This paper contains 4 questions. All questions are compulsory, subject to instruction provided against each questions. All workings must form part of your answer.

Assumptions, if any, must be clearly indicated.

1. Read the case and answer the following questions

JET Airways (JA) Attempted Acquisition of Air Sahara (AS)

When AS announced that it was exploring opportunities for private placement of its equity, airline companies such as Spice Jet showed an interest in acquiring a stake in the company. At this time, however, JA did not express any interest in acquiring a stake in AS. Instead, Kingfisher Airlines, an airline owned by Vijay Mallya, chairman of the UB group, was considered a serious contender for AS. Mallya intended to speed up his growth plan in the aviation industry and believed that a merger with AS would help him achieve this objective. He negotiated with the company for a while but ultimately pulled out saying that the price set for AS was too high.

By this time, price had become the main concern for most of the potential acquirers. Analysts too opined that a valuation of around US\$1 billion for an airline that was in debt was a bit too much.

Some industry observers believed that JA had overvalued AS and hence overpaid for acquiring the company. According to analysts, AS was not a profitable airline and hence the price paid was more than what the airline was actually worth. Alok Dalal, research analyst, India Infoline, commented, "The deal is favorable to Jet in terms of operational efficiencies but it is not so in terms of financials, as Jet has paid a much higher price." He added, "Sahara's financials are not as strong as compared to Jet." Defending the deal, Goyal said, "We've done serious valuation after studying similar deals done abroad. We've analyzed what happened when TWA sold to American Airlines or when Pan Am sold to United Airlines. We know what we are doing." It was also believed that although JA had gained certain synergies from the acquisition, it also had the difficult task of turning around the loss-making AS. Analysts expressed concern that JA would concentrate on making AS profitable at the cost of its own performance.

After JA's announcement of its decision to acquire AS, a member of the Rajya Sabha (the Upper House of the Indian Parliament) complained that JA would create a monopoly in the domestic airline industry by controlling almost half the market.

This would not be in the best interests of consumers and investors, the member said. The deal between JA and AS also faced opposition from airlines like Kingfisher Airlines and GoAir.

In fact, four airlines, Kingfisher Airlines, GoAir, Air Deccan, and IndiGo formed an alliance called Indian Airline Operators' Association (IAOA) before the formal announcement of the JA and AS deal was made.

The purpose of the alliance was to appeal to the government for equitable allotment of parking slots and prime-time departure slots. Later, however, Air Deccan backed out of the alliance.

Capt. Gopinath, CEO of Air Deccan, said, "I am not part of (Mallya's) alliance. I don't want to be a part of an airline group to take on Jet. What I am not looking at is an association which includes only a segment of the industry, as that would not represent the larger interest of the industry."

Analysts opined that though JA had acquired a dominant position in the Indian airline industry, it would need to work hard to sustain this position in the long run. This was because several new private carriers were expected to enter the industry in the next few years.

Observed Alok Sharma, vice president, AS, "Traffic is booming, but as we see it, capacity growth will overtake traffic growth in the next few years. Last year, traffic grew by 20 percent to 25 percent, but load factors of full service carriers were still 70 percent or so." Also, IA and AI were taking steps to improve their operations. IA, which had been

Answer to PTP_Final_Syllabus 2012_Dec2014_Set 2

making losses since 2000-01, had become profitable in 2004. The airline also undertook a major re-branding exercise in December 2005 with a view to enhancing its image. IA and AI were also expected to go in for Initial Public Offerings by mid-2006. Reportedly, the Gol intended to sell around 20-25 percent of the stakes in these companies.

Required:

- (i) Discuss the opinions of analysts expressed after Jet Airways acquired Air Sahara.
- (ii) Describe the steps taken by major Airlines of India to improve the operations.
- (iii) Discuss the challenge faced by the company after announcement of acquiring the Air Sahara.
- (iv) Explain the strategic role of the Management Accountant in reference to merger and acquisition. [5+4+5+6]

Answer:

(i) Some industry observers believed that JA had overvalued AS and hence overpaid for acquiring the company. According to analysts, AS was not a profitable airline and hence the price paid was more than what the airline was actually worth. Alok Dalal, research analyst, India Infoline, commented, "The deal is favorable to Jet in terms of operational efficiencies but it is not so in terms of financials, as Jet has paid a much higher price." He added, "Sahara's financials are not as strong as compared to Jet." Analysts expressed concern that JA would concentrate on making AS profitable at the cost of its own performance.

(ii) Observed Alok Sharma, vice president, AS, "Traffic is booming, but as we see it, capacity growth will overtake traffic growth in the next few years. Last year, traffic grew by 20 percent to 25 percent, but load factors of full service carriers were still 70 percent or so." Also, IA and AI were taking steps to improve their operations. IA, which had been making losses since 2000-01, had become profitable in 2004. The airline also undertook a major re-branding exercise in December 2005 with a view to enhancing its image. IA and AI were also expected to go in for Initial Public Offerings by mid-2006. Reportedly, the Gol intended to sell around 20-25 percent of the stakes in these companies.

(iii) After JA's announcement of its decision to acquire AS, a member of the Rajya Sabha (the Upper House of the Indian Parliament) complained that JA would create a monopoly in the domestic airline industry by controlling almost half the market. This would not be in the best interests of consumers and investors, the member said. The deal between JA and AS also faced opposition from airlines like Kingfisher Airlines and GoAir. In fact, four airlines, Kingfisher Airlines, GoAir, Air Deccan, and IndiGo formed an alliance called Indian Airline Operators' Association (IAOA) before the formal announcement of the JA and AS deal was made. The purpose of the alliance was to appeal to the government for equitable allotment of parking slots and prime-time departure slots.

(iv) The approach of many businesses in considering Mergers and Acquisitions will be a more strategic and reasoned procedure with special consideration of the ethical consequences on the many parties affected. The management accountant is in a position to contribute his expertise in the analysis of acquisition strategy. The need to determine whether acquisition or internal growth is more efficient in reaching long term goals requires accounting expertise and studied analysis of each company's situation. In certain instances, synergies may be obtained or developed which may result in creating an even more advantageous position for the acquiring company. The management accountant should be poised to provide insight into the determination of an appropriate strategy during the various stages of analysis from the defining of objectives to the integration of the companies, if a merger is consummated.

Mergers and acquisitions received a great deal of attention in the 1980's when mega deals such as the acquisition of RJR Nabisco by Kohlbert Kravis Roberts & Company sent shockwaves through the corporate world. While the great majority of activity prior

Answer to PTP_Final_Syllabus 2012_Dec2014_Set 2

to the 1990's took place within national boundaries, the last decade has seen a sharp increase in the rate of global merger activity. The international complexities require a more sophisticated analysis involving foreign exchange rates and social, political and economic environments.

An important aspect of merger and acquisition strategy focuses on strengths and goals before taking actions. Managers and management accountants, as partners in the strategic planning process, must take a cautious view of potential activity, to observe a basic compatibility between the two companies, to determine whether the product mix makes sense, and to determine if the companies' core beliefs are the same. While quantitative factors provide the identifiable aspects that make the merger attractive, they do not portray the whole picture. Many qualitative factors must also be considered before the real value of a company can be estimated.

Whatever the rationale or goals of the combining businesses, the success or failure of the merger is based largely upon financial considerations. Because success or failure is ultimately measured in value, the target company's financial position must be measured carefully so as to quantify as many expected benefits and costs as possible. This process provides the framework wherein a management accountant can make an important contribution. The Management Accountant can utilize his or her expertise to analyze financial data relevant to the acquisition process and provide an informed opinion of valuation with due consideration to all of the qualitative factors and differing parties affected by the potential merger.

2. Answer any two questions from (a), (b) and (c): [2 x 15 =30]

(a)

(i) Define Strategic Drift. Describe how an organization prevents strategic drift?

(ii) Discuss Contingency Planning and its seven steps process. [(1+5)+(2+7)]

Answer:

(i) Strategic drift is a management concept in which an organizations' response to the changing environment is often within the parameters of the organizations culture. Culture is traditionally seen as opposition to change, which stifles innovation and results in a momentum of strategy that can lead to strategic drift.

A subtle and unnecessary shift from an intended course or direction to another one –that is usually undesirable, at least in a long-term perspective.

- First, start with creating a culture that is not only openly tolerant of feedback (both positive and negative) but welcomes it.
- Make sure the organization can both
 - a. Embrace change when necessary, and
 - b. NOT hesitate to question it when is seems unnecessary.
- Clarify C-suite leadership responsibilities and execute within a formal senior decision-making model. Many unwanted surprises are nothing more than tactical or operational challenges that should be handled within individual business functions and cross-functional leadership team.
- Senior executives who align their individual ROI with the long-term success of the organization will be able to quickly identify the nature of the incoming challenge as well as create contingencies to combat it when and if it occurs. This way, the organization continues along its intended direction without unnecessarily deviating.
- Finally, the best way to combat strategic drift is to have a Grand Strategy. A comprehensive set of corporate strategies that are designed to be durable and flexible, tailored to the strengths of the senior decision-makers and organization.

(ii) **Contingency Planning**

Planning is made on the basis of certain assumptions and conditions. If the conditions change drastically, the selected plans may have to be discarded altogether. The

business firms are exposed to continuous changing economic environmental conditions. Therefore, a business organization should be well prepared to deal with contingencies i.e. unforeseen and other critical developments. A contingency plan is a plan to cope with such unforeseen consequences which mark major deviations from the strategic planning process. Such contingency plans are formulated in advance to take care of unknown events and unexpected challenges. They make the future through their proactive planning and advanced preparation. The advantage of contingency planning is that when external opportunities occur contingency plans could allow an organization to capitalize on them quickly.

Steps in Contingency Planning

Robert Linnemam and Rajan Chandran have suggested that a seven step process as follows:

Step 1 - Identify the beneficial and unfavourable events that could possibly derail the strategy or strategies.

Step 2 - Specify trigger points. Calculate about when contingent events are likely to occur.

Step 3 - Assess the impact of each contingent event. Estimate the potential benefit or harm of each contingent event.

Step 4 - Develop contingency plans. Be sure that contingency plans are compatible with current strategy and are economically feasible.

Step 5 - Assess the counter impact of each contingency plan. That is, estimate how much each contingency plan will capitalize on or cancel out its associated contingent event. Doing this will quantify the potential value of each contingency plan.

Step 6 - Determine early warning signals for key contingency event. Monitor the early warning signals.

Step 7 - For contingent event with reliable early warning signals, develop advance action plans to take advantage of the available lead time.

(b)

(i) Explain the objectives of SWOT Analysis and its Advantages and Criticisms.

(ii) "Many organizations in order to achieve quick growth use strategies such as mergers and acquisitions." - Justify. Also discuss various types of mergers. [(2+3+2)+(3+5)]

Answer:

(i) **The objectives of SWOT Analysis are:**

- To identify the shortcomings in the company's present skills and resources.
- To exploit the strengths of the company to achieve its objectives.
- To focus on profit-making opportunities in the business environment and for identifying threats.
- To highlight areas within the company, which are strong and which might be exploited more fully and weaknesses, where some defensive planning might be required to prevent the company from downfall.

Advantages

- It provides a logical framework to be used for systematic discussion of various issues bearing on the business situation, alternative strategies and finally the choice of strategy.
- Another application of SWOT analysis is the structured approach whereby key external threats and opportunities may be systematically compared with internal strengths and weakness.
- A business may have several opportunities but also face some serious threats in the environment. It may have likewise several weaknesses along with one or two major strength. In such situations, the SWOT analysis guides the strategist to visualise the overall position of the firm, and helps to identify the major purpose of the grand strategy being considered.

Criticisms

- It is subjective in nature and varying from person to person.

- It places verities problem in terms of S.W.O.T. without stating solutions.
- There is no method to increase the accuracy of measurement.
- There is no method of verifying the information.

(ii) Many organizations in order to achieve quick growth, expand or diversify use strategies such as mergers and acquisitions. This also helps in deploying surplus funds.

Merger and Acquisition Strategy

Merger and acquisition in simple words are defined as a process of combining two or more organizations together. There is a thin line of difference between the two terms but the impact of combination is completely different in both the cases.

Some organizations prefer to grow through mergers. Merger is considered to be a process when two or more organizations join together to expand their business operations. In such a case the deal gets finalized on friendly terms. Owners of pre-merged entities have right over the profits of new entity. In a merger two organizations combine to increase their strength and financial gains.

When one organization takes over the other organization and controls all its business operations, it is known as acquisition. In the process of acquisition, one financially strong organization overpowers the weaker one. Acquisitions often happen during recession in economy or during declining profit margins. In this process, one that is financially stronger and bigger establishes its power. The combined operations then run under the name of the powerful entity. A deal in case of an acquisition is often done in an unfriendly manner, it is more or less a forced association where the powerful organization takes over a weaker entity.

Types of Mergers

There are three types of Merger: - 1.Horizontal Merger, 2.Vertical Merger and 3. Conglomerate Merger

- **Horizontal merger:** Horizontal mergers are combinations of firms engaged in the same industry. It is a merger with a direct competitor. The principal objective behind this type of mergers is to achieve economies of scale in the production process by shedding duplication of installations and functions, widening the line of products, decrease in working capital and fixed assets investment, getting rid of competition and so on. For example, formation of Brook Bond Lipton India Ltd. through the merger of Lipton India and Brook Bond.
- **Vertical merger:** It is a merger of two organizations that are operating in the same industry but at different stages of production or distribution system. This often leads to increased synergies with the merging firms. If an organization takes over its supplier/producers of raw material, then it leads to backward integration. On the other hand, forward integration happens when an organization decides to take over its buyer organizations or distribution channels. Vertical merger results in operating and financial economies. Vertical mergers help to create an advantageous position by restricting the supply of inputs or by providing them at a higher cost to other players.
- **Conglomerate merger:** Conglomerate mergers are the combination of organizations that are unrelated to each other. There are no linkages with respect to customer groups, customer functions and technologies being used. There are no important common factors between the organizations in production, marketing, research and development and technology. In practice, however, there is some degree of overlap in one or more of these factors.

Conglomerate mergers have been sub-divided into:

- Financial Conglomerates
- Managerial Conglomerates
- Concentric Companies

(c)

Answer to PTP_Final_Syllabus 2012_Dec2014_Set 2

- (i) Distinguish between Vertical Integration and Horizontal Integration.
(ii) Discuss the limitations of Value Chain Analysis.
(iii) Enumerate the Important characteristics of Corporate level strategy.
(iv) "The process of Strategy formulation basically involves six main steps." – Explain these six steps. [3+3+3+6]

Answer:

- (i) In vertically integrated diversification, firms opt to engage in businesses that are related to their existing businesses. The firm remains vertically within the same process. The firm remains vertically within the same process. Sequence moves forward or backward in the chain and enters specific product/ process steps with the intention of making them into new business for the firm.

On the other hand, horizontal Integrated Diversification is the acquisition of one or more similar business operating at the same stage of the production – marketing chain that is going into complementary products, by-products or taking over competitors' businesses.

(ii) Limitations of Value Chain Analysis

The important drawbacks of value chain analysis are as follows:

- Finding the costs, revenues and assets for each value chain activity poses/gives rise to serious difficulties. There is no scientific approach and much depends upon trial and error and experimentation methods.
- Value chain analysis is not easily understandable to all employees and hence may face resistance from employees as well as managers.
- Internal data on costs, revenues and assets used for value chain analysis are derived from financial information of a single period. For long-term strategic decision-making changes in cost structures, market prices and capital investments etc. may not be readily available.
- Isolating cost drivers for each value creating activity, identifying value chain linkage across activities and computing supplier and customer profit margins present serious challenges.
- Identifying stages in an industry's value chain are limited by the ability to locate at least one firm that particulars in a specific stage.
- Value chain analysis is not an exact science. It is more an 'art' than preparing precise accounting reports. Certain judgment and factors of analysis are purely subjective and differ from person to person.

(iii) Important characteristics of corporate level strategy

- The corporate level strategy is formulated by the top management of the organization.
- It is formulated on the basis of a clear and collective point of view about the future.
- The corporate level strategy defines the overall direction of the organization and the broad boundaries based on which the business unit strategy and functional strategy are formulated.
- It is formulated on the basis of an analysis of available resources on the one hand and environmental opportunities on the other.
- The corporate level strategy deals with decision relating to the two-way flow of resources and information between corporate level and product/service lines and businesses. This is done through a coordination mechanism formulated by the top management with inputs from top management of SBUs.
- It is applicable for a long period of time.

- (iv) The process of strategy formulation basically involves six main steps. Though these steps do not follow a rigid chronological order, however they are very rational and can be easily followed in this order.

- **Setting Organizations' objectives** - The key component of any strategy statement is to set the long-term objectives of the organization. It is known that strategy is generally a medium for realization of organizational objectives. Objectives stress the state of

being there whereas Strategy stresses upon the process of reaching there. Strategy includes both the fixation of objectives as well the medium to be used to realize those objectives. Thus, strategy is a wider term which believes in the manner of deployment of resources so as to achieve the objectives.

While fixing the organizational objectives, it is essential that the factors which influence the selection of objectives must be analyzed before the selection of objectives. Once the objectives and the factors influencing strategic decisions have been determined, it is easy to take strategic decisions.

- **Evaluating the Organizational Environment** - The next step is to evaluate the general economic and industrial environment in which the organization operates. This includes a review of the organizations competitive position. It is essential to conduct a qualitative and quantitative review of an organizations existing product line. The purpose of such a review is to make sure that the factors important for competitive success in the market can be discovered so that the management can identify their own strengths and weaknesses as well as their competitors' strengths and weaknesses.

After identifying its strengths and weaknesses, an organization must keep a track of competitors' moves and actions so as to discover probable opportunities of threats to its market or supply sources.

- **Setting Quantitative Targets** - In this step, an organization must practically fix the quantitative target values for some of the organizational objectives. The idea behind this is to compare with long term customers, so as to evaluate the contribution that might be made by various product zones or operating departments.
- **Aiming in context with the divisional plans** - In this step, the contributions made by each department or division or product category within the organization is identified and accordingly strategic planning is done for each sub-unit. This requires a careful analysis of macroeconomic trends.
- **Performance Analysis** - Performance analysis includes discovering and analyzing the gap between the planned or desired performance. A critical evaluation of the organizations past performance, present condition and the desired future conditions must be done by the organization. This critical evaluation identifies the degree of gap that persists between the actual reality and the long-term aspirations of the organization. An attempt is made by the organization to estimate its probable future condition if the current trends persist.
- **Choice of Strategy** - This is the ultimate step in Strategy Formulation. The best course of action is actually chosen after considering organizational goals, organizational strengths, potential and limitations as well as the external opportunities.

3. Read the case and answer the following questions.

Motorola manufactures wireless telephones. Motorola is deciding whether to implement a JIT production system, which would require annual tooling costs of ₹15,00,000. Motorola estimates that the following annual benefits would arise from JIT production:

- Average inventory would decline by ₹ 70,00,000, from ₹ 90,00,000 to ₹ 20,00,000.
- Insurance, space, materials-handling, and setup costs, which currently total ₹ 20,00,000, would decline by 30%.
- The emphasis on quality inherent in JIT systems would reduce rework costs by 20%. Motorola currently incurs ₹ 35,00,000 on rework.
- Better quality would enable Motorola to raise the selling prices of its products by ₹ 30 per unit. Motorola sells 30,000 units each year.

Motorola's required rate of return on inventory investment is 12% per year.

- (i) Calculate the net benefit or cost to the Motorola from implementing a JIT production system.
- (ii) What other nonfinancial and qualitative factors should Motorola consider before deciding whether it should implement a JIT system?

Answer to PTP_Final_Syllabus 2012_Dec2014_Set 2

- (iii) Suppose Motorola implements JIT production, (I) Give examples of performance measures Motorola could use to evaluate and control JIT production, (II) What is the benefit to Motorola of implementing an enterprise resource planning (ERP) system?
[5+6+(5+4)]

Answer:

- (i) Annual Relevant Costs of Current Production System and JIT Production System for Motorola:

Relevant Items	Relevant Costs under Current Production System	Relevant costs under JIT Production system
Annual tooling costs	-	₹15,00,000
Required return on investment: 12% per year × ₹.90,00,000 of average inventory per year	₹10,80,000	
12% per year × ₹20,00,000 of average inventory per year		2,40,000
Insurance, space, materials handling, and setup costs	20,00,000	14,00,000 ^a
Rework costs	35,00,000	28,00,000 ^b
Incremental revenues from higher selling prices	-	(9,00,000) ^c
Total net incremental costs	₹65,80,000	₹50,40,000

Annual difference in favour of JIT production

^a ₹20,00,000 (1 - 0.30) = ₹14,00,000

^b ₹35,00,000 (1 - 0.20) = ₹28,00,000

^c ₹30 × 30,000 units = ₹9,00,000

The annual net benefit of ₹15,40,000 to Motorola of implementing a JIT production system.

- (ii) Other nonfinancial and qualitative factors that Motorola should consider in deciding whether it should implement a JIT system include:

- The possibility of developing and implementing a detailed system for integrating the sequential operations of the manufacturing process. Direct materials must arrive when needed for each sub assembly so that the production process functions smoothly.
- The ability to design products that use standardized parts and reduce manufacturing time.
- The ease of obtaining reliable vendors who can deliver quality direct materials on time with minimum lead time.
- Willingness of suppliers to deliver smaller and more frequent orders.
- The confidence of being able to deliver quality products on time. Failure to do so would result in customer dissatisfaction.
- The skill levels of workers to perform multiple tasks such as minor repairs, maintenance, quality testing and inspection.

(iii)

- (I) Personal observation by production line workers and managers is more effective in JIT plants than in traditional plants. A JIT plant's production process layout is streamlined. Operations are not obscured by piles of inventory or rework. As a result, such plants are easier to evaluate by personal observation than cluttered plants where the flow of production is not logically laid out.

Answer to PTP_Final_Syllabus 2012_Dec2014_Set 2

Besides personal observation, nonfinancial performance measures are the dominant methods of control. Nonfinancial performance measures provide most timely and easy to understand measures of plant performance. Examples of nonfinancial performance measures of time, inventory, and quality include:

- Manufacturing lead time
- Units produced per hour
- Machine setup time \div manufacturing time
- Number of defective units \div number of units completed

In addition to personal observation and nonfinancial performance measures, financial performance measures are also used. Examples of financial performance measures include:

- Cost of rework
- Ordering costs
- Stock out costs
- Inventory turnover

(II) The success of a JIT system depends on the speed of information flows from customers to manufacturers to suppliers. The Enterprise Resource Planning (ERP) system has a single database, and gives lower-level managers, workers, customers, and suppliers access to operating information. This benefit, accompanied by tight coordination across business functions, enables the ERP system to rapidly transmit information in response to changes in supply and demand so that manufacturing and distribution plans may be revised accordingly.

4. Answer any two questions from (a), (b) and (c):

[2×15=30 marks]

(a)

(i) The usual learning curve model is $Y = ax^b$

Where

Y is the average time per unit for x units

a is the time for first unit

x is the cumulative number of units

b is the learning coefficient and is equal to $(\log 0.8 + \log 2) = -0.322$ for a learning rate of 80%

Given that a = 10 hours and learning rate is 80%, you are required to calculate:

- I. the average time for 20 units
- II. the total time for 30 units
- III. the time for units 31 to 40

Given that $\log 2 = 0.301$, Antilog of 0.5811 = 3.812

$\log 3 = 0.4771$, Antilog of 0.5244 = 3.345

$\log 4 = 0.6021$, Antilog of 0.4841 = 3.049

[1¹/₂+1¹/₂+3=6]

Answer:

$$y = ax^b$$

Y = average time per unit for x units

a = time for first unit

x = cumulative number of units

b = learning coefficient 80% level = - 0.322

- I. Average time for 20 units

$$a = 10 \text{ hrs.} \quad x = 20 \quad b = - 0.322 \quad Y = 10 \times (20)^{-0.322}$$

Taking logarithms of both sides.

$$\log Y = \log 10 - (0.322) \log 20$$

Answer to PTP_Final_Syllabus 2012_Dec2014_Set 2

$$\begin{aligned} &= 1 - (.322)(1.301) \\ &= 1 - .4189 \\ \log Y &= .5811 \end{aligned}$$

Taking Antilog of both sides

$$\text{Antilog}(\log Y) = \text{Antilog}(.5811)$$

$$Y = 3.812$$

So average time taken for 20 units = 3.812 hrs. per unit

II. Total time for 30 units

$$Y = ax^b$$

$$Y = 10 \times (30)^{-0.322}$$

Taking logarithm of both sides

$$\log Y = \log 10 - (0.322)(\log 30)$$

$$= 1 - (0.322)(1.4771)$$

$$= 1 - 0.4756$$

$$\log Y = 0.5244$$

Taking Antilog of both sides

$$\text{Antilog} \log Y = \text{Antilog}(.5244)$$

$$Y = 3.345$$

So average time taken for 30 units = 3.345 hrs. per unit

$$\text{Total time taken} = 3.345 \times 30$$

$$= 100.35 \text{ hrs.}$$

III. Total time for units 31 to 40

We already know total time taken for 30 units. By calculating the total time taken for 40 units and then subtracting from it, time taken for 30 units, the remaining time will be that of producing 31 to 40 units.

$$Y = ax^b$$

$$Y = 10 \times 40^{-0.322}$$

Taking log of both sides

$$\log Y = (\log 10) - (.322)(\log 40)$$

$$= 1 - (.322)(1.6021)$$

$$= 1 - .5159$$

$$\log Y = 0.4841$$

Taking Antilog of both sides

$$\text{Antilog}(\log Y) = \text{Antilog}(.4841)$$

$$Y = 3.049$$

Average time for 40 units = 3.049 hrs. per unit

$$\text{Total time for 40 units} = 121.95 \text{ hrs.}$$

Time for units 31 to 40

$$\text{Total time for 40 units} = 121.96 \text{ hrs.}$$

$$\text{Total time for 30 units} = 100.35 \text{ hrs.}$$

$$\text{Time for 31 - 40 units} = 21.61 \text{ hrs.}$$

- (ii) Boraco Ltd. has been offered supplies of special ingredients S at a transfer price of ₹15 per kg by Chhotaco Ltd. which is part of the same group of companies. Chhotaco Ltd processes and sells S to customers external to the group at ₹15 per kg. Chhotaco Ltd. bases its transfer price on cost plus 25% profit mark-up. Total cost has been estimated as 75% variable and 25% fixed.**

You are required to:

Discuss the Transfer prices at which Chhotaco Ltd. should offer to transfer special ingredient S to Boraco Ltd. in order that group profit maximizing decisions may be taken on financial ground in each of the following situations:-

Answer to PTP_Final_Syllabus 2012_Dec2014_Set 2

- I. Chhotaco Ltd. has an external market for all of its production of S at a selling price of ₹15 per kg. Internal transfers to Boraco Ltd. would enable ₹1.50 per kg of variable packing cost to be avoided.
- II. Conditions are as per (I) but Chhotaco Ltd has production capacity for 3,000 kg of S for which no external market is available.
- III. Conditions are as per (II) but Chhotaco Ltd has an alternative use for some of its spare production capacity. This alternative use is equivalent to 2,000 kg of S and would earn a contribution of ₹6,000. [3+2+2=7]

Answer:

- I. The proposed Transfer price [tp], ₹15, is 125% of cost. So, cost= ₹12, of which variable cost is 75%= ₹9 and fixed cost is 25%= ₹3. Since Chhotaco [C] can sell all its production of S in external market, the market price, which is marginal cost plus opportunity cost, should normally be the internal tp.
MP=₹15, Variable cost is ₹9; so opportunity cost is ₹6. However, for internal transfer, packing cost of ₹1.50 will not be needed. Hence, while the outside SP will remain at ₹15, internal tp will be=Variable cost of ₹7.50+opportunity cost of ₹6= ₹13.50 – which is the same as MP- Selling expenses avoided.
- II. For the 3,000 kg where no external market is available, the opportunity cost will not apply and transfers should be at the variable cost of ₹7.50. It will not add to the profit of C Ltd but will enable it to avoid under-capacity working. The remaining output should be transferred at ₹13.50 as described above.
- III. The lost contribution for the 2,000 kg is ₹3 per kg (₹6,000/2,000 kg) giving a tp of ₹10.50 (₹7.50 variable cost + ₹3 opportunity cost). The remaining 1,000 kg for which there is an external market at ₹13.50.

(iii) Why 'Lean Accounting' is needed?

[2]

Answer:

'Lean Accounting' provides accurate, timely, and understandable information that can be used by managers, sales people, operations leaders, accountants, lean improvement teams and other policy makers. The information gives clear insight into the company's performance: both operational and financial. It measures the right things for a company that wants to drive forward with lean transformation.

(b)

- (i) The Marketing Director of a Company engaged in the manufacture and sales of a range of products wants to increase the market share and for the purpose proposes to spend ₹5,00,000 on advertisement campaign.

Two alternatives sales budget have been put forward as under:

Products	A	B	C	D
Budget: (Units'000)				
A:Before advertisement	360	560	520	300
B:After advertisement	380	590	545	315
The selling prices on variable cost data are as under:				
Selling price/Units	₹20	₹24	₹50	₹42
Direct materials/Unit	₹8	₹11	₹25	₹21
Direct Labour/Units	₹3	₹3	₹6	₹5
Variable Overheads/Unit	₹2	₹2	₹4	₹3

Direct labour hour rate is ₹5 per hour. Fixed overheads amount to ₹51,40,000 per annum. The production capacity is limited to 15,00,000 direct labour hour for the ensuing year. A and C however, could be bought on subcontract basis at ₹17 and ₹40 per unit respectively for sale.

Required:

Answer to PTP_Final_Syllabus 2012_Dec2014_Set 2

Present a statement showing profitability of the proposed scheme and state whether the investment in the advertisement campaign is worthwhile. [8+4]

Answer:

Calculation of contribution per unit

Particulars	A	B	C	D
Selling Price (i)	20	24	50	42
Variable cost:				
Direct material	8	11	25	21
Direct Labour	3	3	6	5
Variable overhead	2	2	4	3
Total Cost (ii)	13	16	35	29
Contribution(i)-(ii)	7	8	15	13
Direct Labour Hours p.u.	(3/5) = 0.6	(3/5) = 0.6	(6/5) = 1.2	(5/5) = 1.0
Contribution per Direct Labour hr.	(7/0.6) = 11.67	(8/0.6) = 13.33	(15/1.2) = 12.50	(13/1) = 13.0
Rank	IV	I	III	II

Calculation of Direct Labour hours required:

As per Budget A (Before advertisement)	(Hours)
A	3,60,000 units x 0.6 hr. = 2,16,000
B	5,60,000 units x 0.6 hr. = 3,36,000
C	5,20,000 units x 1.2 hr. = 6,24,000
D	3,00,000 units x 1.0 hr. = 3,00,000
Total	14,76,000
As per Budget B (After advertisement)	(Hours)
A	3,80,000 units x 0.6 hr. = 2,28,000
B	5,90,000 units x 0.6 hrs. = 3,54,000
C	5,45,000 units x 1.2 hrs. = 6,54,000
D	3,15,000 units x 1.0 hrs. = 3,15,000
Total	15,51,000

Budget B required 51,000 Direct labour hours in excess of 100% capacity of 15,00,000 Direct Labour hours. Therefore product A or C can be purchased from outside to meet the excess demand.

Profitability statement (Before advertisement)

Particulars	A	B	C	D	Total
Units	3,60,000	5,60,000	5,20,000	3,00,000	
Contribution p.u.	7	8	15	13	
Total Contribution	25,20,000	44,80,000	78,00,000	39,00,000	1,87,00,000
Less: Fixed cost profit					51,40,000
					1,35,60,000

Profitability statement if product C is bought on sub-contract basis for balance hours

Particulars	A	B	D	C	C (Bought out)	Total
Units	3,80,000	5,90,000	3,15,000	5,02,500	42,500	-----
Direct Labour hrs. p.u.	0.6	0.6	1.0	1.2	-----	-----
Total D.L. Hours	2,28,000	3,54,000	3,15,000	6,03,000	-----	15,00,000
Contribution p.u.	7	8	13	15	10	-----
Total Contribution	26,60,000	47,20,000	40,95,000	75,37,500	4,25,000	1,94,37,500
Less: Fixed cost						51,40,000
Profit						1,42,97,500

Profitability statement if product A is bought on sub-contract basis for balance hours

Answer to PTP_Final_Syllabus 2012_Dec2014_Set 2

Particulars	B	C	D	A	A (bought out)	Total
Units	5,90,000	5,45,000	3,15,000	2,95,000	85,000	-----
Direct Labour hrs. p.u.	0.6	1.2	1.0	0.6	-----	-----
Total D.L. hrs.	3,54,000	6,54,000	3,15,000	1,77,000	-----	15,00,000
Contribution p.u.	8	15	13	7	3	-----
Total contribution	47,20,000	81,75,000	40,95,000	20,65,000	2,55,000	1,93,10,000
Less: Fixed cost						51,40,000
Profit						1,41,70,000

Incremental profit if product C is bought out	=1,42,97,500-1,41,70,000	=₹1,27,500
Therefore product A can be produced		
Profit if advertisement campaign is taken up	=1,42,97,500-5,00,000	=₹1,37,97,500
Profit, if no advertisement campaign is taken up	=₹1,35,60,000	
Incremental profit if advertisement campaign is taken up	=1,37,97,500-1,35,60,000	=₹2,37,500

Suggestion: Hence it is suggested to take up advertisement campaign and procure product A from outside for excess direct labour hours over the normal capacity.

(ii) Enumerate the steps involved in target costing?

[3]

Answer:

The following are the steps involved in target costing.

- Ascertain from market studies the demand and the price at which the product can be sold.
- Deduct the required profit percentage from the selling price.
- The balance represents the target cost.
- Compare the actual/estimated cost with the target cost.
- If the actual/estimated target cost is greater than the target cost, introduced cost reduction measures to bring down the cost to the level of target cost. If the required reduction in cost is not possible, reject the proposal to produce the product.

(c)

(i) State cost of quality? How it can be reduced?

[1+2]

Answer:

The cost of quality is the sum of cost of conformance, cost of non-conformance and cost of lost opportunity. The quality costs amount to somewhere between 5-25% of turnover depending on industry. The quality cost will be much more if we include the potential loss of business from the affected customers. With cost of quality accounting for such a large proportion of turnover any reduction in quality cost will improve profitability and provide competitive edge to the company.

The quality cost reduction can be achieved in the following two stages:

- First, when prevention costs are increased to pay for the right kind of systems engineering work in quality control, a reduction will occur in rejection, defect and rework of output. This defect reduction means a substantial reduction in both types of failure costs.
- Secondly, a reduction in defective output will have a positive effect on appraisal costs because defect reduction means a reduced need for routine inspection and test activities. It follows that as prevention is increased the need for appraisal decreases. The end result is a substantial reduction in the cost of quality and an increase in the level of quality.

Answer to PTP_Final_Syllabus 2012_Dec2014_Set 2

- (ii) Bharat Consumer products employ 10 trucks of 10 tonnes capacity to deliver products to their distributors. The vehicles return empty on the return journey. The following data refer to the month of May 2014:

	Budget	Actual
Load Carried (tonnes)	4,000	3,800
No. of truck trips	500	450
Journey hours	3,000	25,000
Loading Time (hours)	1,000	800
Km. Travelled	25,000	25,000
Diesel used (litres)	12,500	13,000
No. of drivers	12	12
No. of mechanics	5	5
Fixed costs	₹8,000	₹8,000
Cost per litre of Diesel	1.00	0.95
Wages per driver per month	1,000	1,050
Wages per Mechanic per month	800	900
Shares for Repairs	2,000	2,500

Prepare statement for management detailing budgeted and actual operating cost. Also give your comments on performance. [5+4]

Answer:

Comparative Statement of Operating Costs

No. of Trucks:10	Capacity:10 Tonnes		Month: May 2013
	Budget	Actual	
Cost of Diesel	12,500	12,350	150
Spares for Repairs	2,000	2,500	-500
Wages: Drivers	12,000	12,600	-600
Mechanics	4,000	4,500	-500
Total variable costs	30,500	31,950	-1,450
Total Fixed Costs	8,000	8,000	-
Total operating costs	38,500	39,950	-1,450
Load and Distance carried (1,000 tonne-km.)	1,00,000	95,000	-5,000
Operating cost per 1,000 tonne km.	0.385	0.422	0.037
Operating cost per truck trip	77	89	-12
Cost of Diesel per journey hour	4.17	4.94	-0.77
Truck loaded per hour (tone)	4.00	4.75	0.75
Journey hours per trip	6.00	5.55	0.45
Kms travelled per trip	50.00	55.55	5.55

Comments:

- I. The actual operating costs are ₹1,450 more than the budgeted costs. Of course, the cost of diesel has come down by ₹150 due to reduction in its price, but the other costs such as spares and wages all together have gone up by ₹1,600.
- II. The operation cost per 1,000 tonne km, has gone up from 38.5 paise to 42.2 paise because of two reasons: (a) the actual load carried is less than what was budgeted and (b) total operating cost have gone up as stated in (I) above.
- III. There is increase in the operating cost per trip also because of fall in number of trips and rise in operating costs.
- IV. In spite of reduction in the cost of petrol and journey hours per trip (both favourable) the cost of fuel per journey hour has gone up. This is due to reduction in number of trips.
- V. Loading of trucks per tone-hour is favourable. This has gone up from 4 to 4.75 per tonne-hour.
- VI. The same distance has been covered by a smaller number of trips. Thus kms. Travelled per trip is also favourable. It also explains that longer distance was travelled per trip

Answer to PTP_Final_Syllabus 2012_Dec2014_Set 2

on account of which reduced load was carried. However, increase in consumption of diesel needs explanation because the distance travelled was the same as budgeted.

- VII. Increase in the cost of spares indicates a large number of break-downs on account of which there has been a fall in journey hours to some extent.

(iii) State the term Margin of Safety? How it is calculated?

[2+1]

Answer:

The margin of safety refers to sales in excess of the break-even volume. It represents the difference between sales at a given activity level and sales at break-even point. It is important that there should be a reasonable margin of safety to run the operations of the company in profitable position. A low margin of safety usually indicates high fixed overheads so that profits are not made until there is a high level of activity to absorb the fixed costs. A margin of safety provides strength and stability to a concern.

The margin of safety is an important measure, especially in times of receding sales, to know the real position to operate without incurring losses and to take steps to increase the margin of safety to improve the profitability.

Margin of safety is calculated by using the following formula:

Margin of safety = Actual Sales – Break even Sales
