DECEMBER - 2021

Paper-15 : STRATEGIC COST MANAGEMENT – DECISION MAKING

Time Allowed : 3 Hours

Full Marks : 100

| | Section A MCQ | 20X1= 20 Marks |
|---|---|----------------|
| Q.1 In cost-plus pricing, the markup consists of Ans 1. total cost and desired ROI. | | |
| 2. selling and administrative costs. | | |
| 3. manufacturing costs. | | |
| 🛹 4. desired ROI | | |
| a product. | mation pertaining to a normalmonthly production of 10,000 | units of |
| Standard factory overhead rates are based on a no Standard factory overhead rates per direct labor h | ormal monthly volume of onestandard direct hour per unit. | |
| Fixed | Rs. 6.00 | |
| Variable | <u>Rs. 10.00</u> | |
| | Rs. 16.00 | |
| Units actually produced in current month | 9,000 units | |
| Actual factory overhead costs incurred | | |
| (Includes Rs. 70,000 fixed) | Rs. 156,000 | |
| Actual direct labor hours | 9,000 hours | |
| The variable overhead spending variance is | | |
| Ans 1. Rs.0 | | |
| 2. Rs.10,000 (F) | | |
| ✔ 3. Rs.4,000 (F) | | |
| 4. Rs.86,000 (A) | | |
| | e supply point of raw materials at Rs.80,000. Consequents. S. Thesegoods used to be sold for Rs. 1,00,000 and variab | |
| Ans 1. Decrease by Rs. 80,000 | | |
| 2. Decrease by Rs. 60,000 | | |
| 3. Decrease by Rs. 20,000 | | |
| 🛹 4. No change | | |
| Q.4 Companies that would benefit from back-flush cos | ting include companies | |
| Ans 1. None of these. | | |
| 2. whose inventories vary from period to peri | od. | |
| 3. which have fast manufacturing lead times. | | |
| 4. companies that require audit trails. | | |
| Q.5 A learning curve is a function | | |
| Ans 1. where unit costs increase as productivity i | ncreases. | |
| 2. that increases at a greater rate as workers | become more familiar with their tasks. | |
| 3. that is linear. | | |
| \checkmark 4. that measures the decline in labor-hours p | er unit due to workers becoming better at a job. | |

| Q.6 Which of the following is TRUE about the theory of constraints? |
|---|
| Ans 1. TOC recognizes that lower inventories means slower response to customers. |
| 2. TOC recognizes that lowering inventory decreases carrying costs and thus decreases operating expenses and improves net income. |
| 3. TOC recognizes that lower inventories means more defects. |
| 4. TOC recognizes that EOQ is important. |
| Q.7 Activities required to design, develop, produce, market, distribute, and service aproduct are known as |
| Ans 1. target activities. |
| 2. value-chain activities. |
| 3. whole life activities. |
| 4. overhead. |
| Q.8 Only direct materials, direct labor, and variable manufacturing overhead costs are considered product costs when |
| using |
| Ans 1. absorption costing. |
| 2. full costing. |
| ✓ 3. variable costing. |
| 4. product costing. |
| |
| Q.9 When there is excess capacity, it makes sense to accept a one-time-only special orderfor less than the current selling price when |
| Ans 🧹 1. incremental revenues exceed incremental costs. |
| 2. additional fixed costs need not be incurred to accommodate the order. |
| 3. there is a positive contribution per unit of the product under normal capacity and spare capacity |
| 4. the special order is from a normal customer. |
| Q.10 A company that is a price-taker would most likely use which of the following methods? |
| Ans v 1. Target costing |
| 2. Cost plus pricing, contribution approach |
| 3. Cost plus pricing, absorption approach |
| 4. Time-and-material pricing |
| Q.11 To complete the first setup on a new machine took an employee 200 minutes. Using an 80% incremental unit-time learning model indicates that the second setup on the newmachine is expected to take |
| Ans \checkmark 1. 120 minutes. |
| 2. 160 minutes. |
| 3. 60 minutes |
| |
| 4. 80 minutes. |
| Q.12 The following will be the appropriate action to finish a project early |
| Ans 1. Crash activities on the non critical path so that they become critical |
| 2. Crash activities on the non critical paths so that they remain non critical |
| 3. Crash activities on the critical path so that they become non critical |
| 4. Crash activities on the critical paths such that the critical paths remain critical |
| Q.13 If the unit level of inventory increases during an accounting period, then |
| Ans 1. operating income will be the same under absorption costing and variable costing. |
| 2. the exact effect on operating income cannot be determined. |
| ✓ 3. more operating income will be reported under absorption costing than variablecosting. |
| 4. less operating income will be reported under absorption costing than variable costing. |
| |

| Q.14 | In a transportation matrix (where Ri are rows and Cj are columns), the second allocation under the North West Corner Rule can be |
|------|--|
| Ans | ✔ 1. R1C2 |
| | 2. None of these |
| | 3. R2C3 |
| | 4. R1C3 |
| | |
| Q.15 | is the difference between the sales price needed to capture a predetermined market share and the desired profit per unit. |
| Ans | 1. Gross profit |
| | ✓ 2. Target cost |
| | 3. Target price |
| | 4. None of these. |
| Q.16 | Liability claims is an example of |
| Ans | 1. prevention costs. |
| | 2. appraisal costs. |
| | ✓ 3. external failure costs. |
| | 4. internal failure costs. |
| Q.17 | Theis a period of time when sales increase at a decreasing rate. |
| Ans | 1. maturity stage |
| | 2. growth stage |
| | 3. introduction stage |
| | 4. decline stage |
| Q.18 | NM paid Rs.5,30,000 for a machine used to powder wheat. The machine can be sold forRs.1,30,000. The sale value of wheat is Rs 8,00,000 and its variable cost is Rs.4,50,000.The opportunity cost of producing wheat flour is |
| Ans | 1. Rs. 5,30,000 |
| | 2. Rs. 3,50,000 |
| | 3. Rs. 8,00,000 |
| | ✓ 4. Rs. 1,30,000 |
| Q.19 | Which of the following will always be a relevant cost? |
| Ans | 1. Fixed cost |
| | 2. Opportunity cost |
| | 3. Variable cost |
| | 4. Sunk cost |
| Q.20 | The operational activity of setting up equipment is classified as a |
| Ans | 1. unit-level activity. |
| | 2. facility-level activity. |
| | ✓ 3. batch-level activity. |
| | 4. product-level activity. |
| | |
| | |

| Q.1 | MK Company incurred the following costs for 60,000 units: Variable costs Rs.18,00,000 Fixed costs Rs. 24,00,000 MK has received a special order from a foreign company for 5,000 units. There is sufficient capacity to fulfill the order without jeopardizing regular sales. Filling the order will require spending an additional Rs.85000 for shipping. If MK wants to break even on the order, what should the unit sales price be? |
|-----|---|
| A | inswer: Rs. 47 |
| Q.2 | At KL Company, the cost of the personnel department has always been charged toproduction departments based upon number of employees. Recently, opinions gathered from the department managers indicate that the number of new hires might be a better predictor of personnel costs. Total personnel department costs are Rs.200,000. |
| | Department <u>A B C</u> |
| | Number of employees 30 270 100 |
| | The number of new hires 8 12 5 |
| | If number of new hires is considered the cost driver, what amount of personnel costs will be allocated to Department A? Answer: Rs. 64,000 |
| Q.3 | Spoilage is an example ofquality cost |
| | Answer: Internal failure |
| Q.4 | During the lockdown days, a hospital that was running to capacity in terms of medical staff available on regular shifts proposes to share profits with staff that are willing to work extra time. Can this be termed lean management? |
| | Answer: Yes. Planning from a lean perspective-invest in people |
| Q.5 | A hand crafted product is produced in a factory taking 8 hours per unit against the standard set at 9 hours. The production manager is trying to find means of reducing the standard to lesser hours by improving material handling, etc. This measure is considered as (Cost Reduction/ Cost Control) |
| | Answer: Cost Reduction |
| Q.6 | Hardware Company reported the following results from the sale of 5,000 hammers in May: sales Rs. 200,000, variable costs Rs.120,000, fixed costs Rs.60,000, and netincome Rs.20,000. Assume that Hardware increases the selling price of hammers by10% on June 1. How many hammers will have to be sold in June to maintain the same level of net income? |
| | Answer: 4,000 |
| Q.7 | A factory is trying to establish standard time for a certain job. Workers arrive at 8:00am, during the day take tea and lunch breaks for 1 $\frac{1}{2}$ hours, machines need set up for $\frac{1}{2}$ an hour and workers leave by 4 p.m A worker can ideally produce a unit of output if he is at his job for two hours. How much is the standard labour hour per unit? |
| | Answer: 2.67 hours |
| Q.8 | The average demand per day of cars from a travel company by past weeks observation is 4, whereas, by a simulation for 7 days using random numbers, theaverage demand is 7 per day. Should you advise the company to go by the simulation result? |
| | Answer: No. Simulation is required for a large no. of days in order to arrive at a reasonable conclusion for taking action. |

Q.1 X Ltd is a diversified corporation with separate and distinct operating divisions. Each division's performance is evaluated on the basis of total profits and return on division investment. The Division A manufactures and sells table top air cooler units. Division A currently produces 15,000 units. Division A's manager believes that sales can be increased if the unit selling price of the table top air cooler is reduced. A market research study conducted by an independent firm at the request of the manager indicates that a 15% reduction in the selling price (Rs.60) would increase volume by 16% or 2,400 units, the reduced price applying to all the units. Division A has sufficient production capacity to manage this increased volume withno increase in fixed costs. At present, Division A uses a filter in each of its units that it purchases from an outside supplier at a cost of Rs.70 per filter. The manager of Division A has approached the manager of the Division B regarding the sale of a filter unit to Division A. The Division B currently manufactures and sells exclusively to outside firms a filter that is similar to the one used by Division A. The specifications of the Division A filter are slightly different which would reduce the Division B's direct material cost by Rs.5 per unit. In addition, the Division B would not incur any variable selling costs in the units sold to Division A. The manager of Division A wants all of the filters it uses to come from one supplier, and has offered to pay B Rs.50 for each filter unit. Division B has the capacity to produce 75,000 units and currently sells 64,000 units in the market. (Rs)

| | | (1.01) |
|-----------------------------|------------|------------|
| Particulars | Division A | Division B |
| Selling Price per unit | 400 | 100 |
| Manufacturing Costs: | | |
| Filter | 70 | - |
| Variable Manufacturing Cost | 112 | 30 |
| Variable Marketing Cost | 18 | 6 |

i) Should Division A go for the increased volume of sales from a financial perspective? Justify your recommendation with appropriate figures. [2]

ii) If B should supply the entire requirement of A after considering i) above, what is the minimum transfer price that B will agree to, given that a single transfer price applies to all units transferred to A ? Is B likely to accept A's proposed transfer price? [3]

iii)In the interest of X Ltd. as a whole, what should be the best strategy in terms of sourcing and selling the filters? Work out a suitable transfer price for the management to convince A and B. Assume that X Ltd. is not constrained about avoiding partial supply.[3]

25 per unit(its variable cost to A) even from its spare capacity.

Answer:

| (i) | Sales revenue for 15000 units = 15000 x 400 = Rs. 60,00,000 Sales Revenue for 17400 units = 17400 x 0.85x 400 = 17400 A should not go for the increased sales at that discount s contribution. | x 340=Rs. 59,16,000 | | | | |
|-------|--|--|--|--|--|--|
| | Alternatively, Contribution per unit 200, for 15000 units | = Rs. 30,00,000 | | | | |
| | Contribution per unit 140, for 17400 units | = Rs. 24,36,000 | | | | |
| | The volume of 15000 units of air coolers is more profitable | for A. | | | | |
| (ii) | B has spare capacity of 75000-64000 = 11000 units. This ca | | | | | |
| | less selling and material saving, i.e. 11000 units at 25 Rs. per unit.=Rs. 2,75,000 4000 units have to be supplied by diverting market sales at Rs. 100 = Rs. 4,00,000 | | | | | |
| | Transfer price for 15000 units = Rs. 6,75,000 | RS. $100 = RS. 4,00,000$ | | | | |
| | Rs/unit = 675000/15000 = 45 | | | | | |
| | A has offered Rs. 50. It will be in B's interest to accept the c | offer. | | | | |
| (iii) | For every unit of B sold outside, the company earns a cont to A, the cost saved is just Rs. 70-25, which is Rs. 45 per ur | | | | | |
| | For X Ltd's best strategy, B should supply 11000 units to A from the market. X Ltd should convince A to accept parti since instead of paying Rs. 70 outside for the entire requi Rs. 50, which is also acceptable by B for its spare capa market at Rs. 70 and 11000 units from B at Rs. 50 which it | al supply from B. A also stands to gain irement of 15000 units, A will incur only city. A should buy 4000 units from the | | | | |

| | Product | Α | В | С | D | Е | F | Total |
|---|--------------------|-----|-----|------|----|-----|-----|-------|
| ſ | Contribution (Rs.) | 500 | 200 | 1500 | 75 | 100 | 125 | 2500 |

Prepare a Pareto product contribution chart and comment on the sales.

Answer:

Rearrange the products in descending order of contribution and find out the cumulative contribution percentage.

| Product | Contribution Rs. | Cumulative Contribution | Cumulative |
|---------|------------------|-------------------------|-----------------|
| | | Rs. | Contribution(%) |
| С | 1500 | 1500 | 60% |
| Α | 500 | 2000 | 80% |
| В | 200 | 2200 | 88% |
| F | 125 | 2325 | 93% |
| E | 100 | 2425 | 97% |
| D | 75 | 2500 | 100% |
| Total | 2500 | | |

On analysis it is found that 80% of the total contribution is earned by C and A. Hence these two products should be carefully monitored and nurtured. The other products should be investigated for improvement of contribution.

(iii)Optimal assignment. Optimum Sales Value is as follows :

| Sales Man | Territory | Sales (Rs 000) |
|-----------|-----------|----------------|
| Α | 2 | 30 |
| В | 3 | 16 |
| С | 4 | 9 |
| D | 1 | 48 |
| | Total | 103 |

Q.2 Define Value Engineering(VE). What are the issues considered during a VE review?

Answer:

4 Marks

- Value engineering involves searching for opportunities to modify the design of each component or part of a product to reduce cost, but without reducing the functionality and quality of the product. The Issues are as follows :
- Elimination of unnecessary functions from the production process.
- Elimination of unnecessary product qualities
- Design minimisation
- Substitution of parts
- Search for better way of doing things.

Four LAQ

| Q.1 | ST Ltd. us | ses a standard costing system. The following data relating to a single product for the month of Septem | ber |
|-----|------------|--|------------|
| | has been | furnished to you. The Standard costper unit was: | 8 Marks |
| | Direct Ma | terial: Standard Price Rs.10 per kg, Standard quantity 20 kgs per unit | 0 10101113 |
| | Direct Lal | bour : Standard Rate of pay Rs.5.50 per hour, Standard Time 12 hours per unit | |
| | Productio | on OH Costs, all classified as fixed, were budgeted at Rs.9,00,000 p.a. Thestandard time for producing | |
| | one unit i | s 12 machine hours and normal capacity is60,000 machine hours p.a. Production OH is absorbed on | |
| | machine | hours. The costs incurred and other relevant information for the month is given below: | |
| | Direct Ma | terial used-1,00,000 kgs at a cost of Rs.10,50,000 | |
| | Direct Wa | ges paid-Rs.3,10,000 for 62,000 hours | |
| | Productio | on Overhead-Rs.9,26,000 | |
| | Machine | capacity used-60,000 hours | |
| | Actual ou | tput-4,800 units. Assume no stocks of WIP or Finished Goods at the yearend. | |
| | i) | The standard product cost for one unit is | |
| | ii) | Variance for Material (Usage and Price) are | |
| | iii) | Variance for Labour(Rate and Efficiency) are: | |
| | iv) | Variance for Fixed OH (Volume and Expenditure) are | |
| | Answer | : | |
| | i) | Standard Product Cost for one unit = Rs. 446 | |
| | ii) | Material Usage Variance:= Rs. 40,000 (A) | |
| | | Material Price Variance:= Rs. 50,000 (A) | |
| | iii) | Labour Efficiency Variance:= Rs. 24,200 (A) | |
| | | Labour Rate Variance:= Rs. 31,000(F) | |
| | iv) | Fixed OH Volume Variance: = Rs. 36,000(A) | |
| | | Fixed OH Expenditure Variance: = Rs. 26,000(A) | |
| | | | |
| | | | |

Q.2 What is the impact of Just-in-time on Product Prices?

4 Marks

Answer:

When a company achieves a higher level of product quality, along with ability to deliver products on the dates required, customers may be willing to pay a premium. This is particularly true in industries where quality or delivery reliability is low. If customers are highly sensitive to these two factors, it may be possible to increase the price substantially. Alternatively, if these factors are not of great importance, if customers place a higher degree of importance on other factors, then there will be no opportunity for a price increase.

In industries where many companies are adopting JIT systems at the same time or have already installed them, an improvement in product quality and delivery times does not differentiate a company from its peers. Instead, since everybody else is offering the same level of quality and service it just keeps a company from losing sales to its competitors. In such a situation it is more likely that all companies remaining in the industry will use their new-found lower costs to initiate a price war that will result in a drop in prices. Consequently, the impact of a JIT system on product pricing is primarily driven by customers' perceived need for higher product quality and reliable delivery times, as well as the presence of competitors with JIT system, the same installation, and operational base.

Five LAQ

| Activity | | imistic days | Most likely da | | | 7 N |
|--|--|--|--|--------------------------------|---------------------------|-----|

Q.1 Getwell Hospitals is a recently constructed multi speciality hospital and has beenoperating for the last three years quite successfully. A group of doctors who werefounders of this hospital could not use the entire facility by itself to recover costs and make profits. They rented out the hospital facilities to different expert groupslike pediatrics, cardiology etc. and collected amounts consisting of two elements-the variable portion relating to the number of patient days and a fixed portion irrespective of the number of beds occupied. Apart from common facilities, the respective expert groups had to engage its own nurses, aides and supervisory nurses on a full time basis. This is being done carefully after assessing the abilityto attend on the requirements of patients.

During COVID, the number of patients who came for regular check-ups and undertook consequent preventive medical treatments dwindled drastically and therefore the whole hospital saw the necessity and opportunity to function as a COVID Care hospital. Now the facilities were rented to Covid treatment groups and all groups had a hundred per cent occupancy.

One such group called Covid Sure Cure (CSC) that rented this facility had the following figures for the past year: It had taken up 60 beds for 365 days. It was charged by Getwell a sum of Rs. 9,31,80,000 as the fixed charge and Rs. 9000 per patient day as the variable charge.CSC in turn charged its patients Rs. 15000 per bed per day.

The range of requirements beginning from the minimum relating to nursing staff isgiven below: 4+2+2+4= 12 Marks

| Annual patient days | Aides (A) | Nurses (N) | Supervising Nurses |
|---------------------|-----------|------------|--------------------|
| 10,000 - 14,000 | 20 | 10 | 3 |
| 14001-17000 | 21 | 11 | 3 |
| 17001- 20000 | 21 | 12 | 3 |
| 20001-23000 | 22 | 13 | 4 |
| 23001-25000 | 23 | 14 | 5 |
| 25001-27000 | 24 | 15 | 7 |

Salaries that had to be paid annually to each person under these categories was the following

| | Rs.3,60,000 | Rs.4,80,000 | Rs.5,40,000 | |
|--|-------------|-------------|-------------|--|
|--|-------------|-------------|-------------|--|

CSC was comfortable during the pandemic as all the beds were occupied all the time and there was a growing demand for more. But in the coming year, as the number of patients has come down and some beds are now being given for post- covid complication care patients, CSC wants to look at its cost structure to be able to negotiate a different pricing with Getwell.

- i) Under the given conditions of outflows to salaries and to Getwell, how many patient days will be required by CSC for the earliest break-even?
- ii) How many beds does this figure translate to, on an average?
- iii) Will it be substantially worthwhile for CSC to consider trimming its requirement on the number of nursing staff?
- iv) If CSC expects an 80 % level of occupancy during the current period, what should be the amount to be paid to Getwell with a 25 % margin of safety? It feels it cannot increase the charge to patients.

Answer:

- i) BEP patient days = 18020.
- ii) This translates to about 49.36, say 50 beds occupancy. (18020 ÷ 365)
- iii) The staffing cost is very low considering the huge bulk of fixed cost to Getwell. As seen above, one level of pruning will only save 230 patient days, which is not even one bed occupancy. Hence it is not worthwhile for CSC to trim its staff. Another aspect is that trimmed workforce may be stressed and may not render adequate quality. Further, it is stated that the staffing is already done carefully. Hence there is no likelihood of a substantial reduction in nursing staff cost.
- iv) Amount to be paid to Getwell towards fixed and variable component = Rs. 18,21,60,000.
